**Part Number: 910252 Rev. F**

---

The lightning flash with the arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the product.

# IMPORTANT SAFETY & INSTALLATION INSTRUCTIONS

## INSTRUCTIONS PERTAINING TO THE RISK OF FIRE, ELECTRIC SHOCK, OR INJURY TO PERSONS

**WARNING** - When using electric products, basic precautions should always be followed, including the following:

1. Read all of the Safety and Installation Instructions and Explanation of Graphic Symbols before using the product.
2. This product must be grounded. If it should malfunction or breakdown, grounding provides a path of least resistance for electric current to reduce the risk of electric shock. This product is equipped with a power supply cord having an equipment-grounding conductor and a grounding plug. The plug must be plugged into an appropriate outlet which is properly installed and grounded in accordance with all local codes and ordinances.
- DANGER** - Improper connection of the equipment-grounding conductor can result in a risk of electric shock. Do not modify the plug provided with the the product - if it will not fit the outlet, have a proper outlet installed by a qualified electrician. Do not use an adaptor which defeats the function of the equipment-grounding conductor. If you are in doubt as to whether the product is properly grounded, check with a qualified serviceman or electrician.
3. **WARNING** - This product is equipped with an AC input voltage selector. The voltage selector has been factory set for the mains supply voltage in the country where this unit was sold. Changing the voltage selector may require the use of a different power supply cord or attachment plug, or both. To reduce the risk of fire or electric shock, refer servicing to qualified maintenance personnel.
4. Do not use this product near water - for example, near a bathtub, washbowl, kitchen sink, in a wet basement, or near a swimming pool, or the like.
5. This product should only be used with a stand or cart that is recommended by the manufacturer.
6. This product, either alone or in combination with an amplifier and speakers or headphones, may be capable of producing sound levels that could cause permanent hearing loss. Do not operate for a long period of time at a high volume level or at a level that is uncomfortable. If you experience any hearing loss or ringing in the ears, you should consult an audiologist.
7. The product should be located so that its location or position does not interfere with its proper ventilation.
8. The product should be located away from heat sources such as radiators, heat registers, or other products that produce heat.
9. The product should be connected to a power supply only of the type described in the operating instructions or as marked on the product.
10. This product may be equipped with a polarized line plug (one blade wider than the other). This is a safety feature. If you are unable to insert the plug into the outlet, contact an electrician to replace your obsolete outlet. Do not defeat the safety purpose of the plug.
11. The power supply cord of the product should be unplugged from the outlet when left unused for a long period of time. When unplugging the power supply cord, do not pull on the cord, but grasp it by the plug.
12. Care should be taken so that objects do not fall and liquids are not spilled into the enclosure through openings.
13. The product should be serviced by qualified service personnel when:
  - A. The power supply cord or the plug has been damaged; or
  - B. Objects have fallen, or liquid has been spilled into the product; or
  - C. The product has been exposed to rain; or
  - D. The product does not appear to be operating normally or exhibits a marked change in performance; or
  - E. The product has been dropped, or the enclosure damaged.
14. Do not attempt to to service the product beyond that described in the user maintenance instructions. All other servicing should be referred to qualified service personnel.
15. **WARNING** - Do not place objects on the product's power supply cord, or place the product in a position where anyone could trip over, walk on, or roll anything over cords of any type. Do not allow the product to rest on or be installed over cords of any type. Improper installations of this type create the possibility of a fire hazard and/or personal injury.

## RADIO AND TELEVISION INTERFERENCE

**Warning:** Changes or modifications to this instrument not expressly approved by Young Chang could void your authority to operate the instrument.

**Important:** When connecting this product to accessories and/or other equipment use only high quality shielded cables.

**Note:** This instrument has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This instrument generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this instrument does cause harmful interference to radio or television reception, which can be determined by turning the instrument off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the instrument and the receiver.
- Connect the instrument into an outlet on a circuit other than the one to which the receiver is connected.
- If necessary consult your dealer or an experienced radio/television technician for additional suggestions.

### NOTICE

This apparatus does not exceed the Class B limits for radio noise emissions from digital apparatus set out in the Radio Interference Regulations of the Canadian Department of Communications.

### AVIS

Le present appareil numerique n'emet pas de bruits radioelectriques depassant les limites applicables aux appareils numeriques de la class B prescrites dans le Reglement sur le brouillage radioelectrique edicte par le ministere des Communications du Canada.

# Chapter 1

## Front Panel

### Front Panel Quick Reference

This section describes features common to both the rack versions of the K2500 (K2500R and K2500RS) as well as the keyboard versions of the K2500 (K2500, K2500S, K2500X, and K2500XS). The buttons and sliders that are unique to the keyboard models are described on page 1-4.

#### Volume Knob/ Slider

Controls mixed audio outputs and headphone jack only. Does not send MIDI Volume (MIDI 07).

#### Mode Buttons

Press any of these eight buttons to enter the corresponding mode.

#### Chan/Bank Buttons

Scroll through the layers of the current program while in the Program Editor. Scroll through the zones in the current setup while in Setup mode. Scroll through the Quick Access banks while in Quick Access mode.

#### Edit Button

Functional in most modes. Press Edit to modify the currently selected object or parameter. If it's not editable, pressing Edit will do nothing.

There are editors available from every mode but Disk mode. The effect of pressing Edit in each of the modes is listed below.

**When in this mode—Pressing the Edit button...**

Program mode—	...enters the Program Editor, where you can edit the currently selected program. Chapter 6 in the <i>Performance Guide</i> covers the Program Editor.
Setup mode—	...enters the Setup Editor, where you can edit the currently selected setup. Chapter 7 in the <i>Performance Guide</i> describes the Setup Editor.
Quick Access mode—	...enters the Quick Access Editor, where you can change the program or setup assigned to the bank slot that was selected when you entered the Quick Access Editor. See Chapter 8 in the <i>Performance Guide</i> .
Effects mode—	...enters the Effects Editor, where you can edit the currently selected effects preset. Chapter 9 in the <i>Performance Guide</i> explains the Effects Editor.
MIDI mode—	...enters the Velocity Map or Pressure Map Editor if the Velocity or Pressure Map parameter is selected on either the XMIT page or the RECV page. See Chapter 17 in the <i>Performance Guide</i> . Enters the Program Editor if the Program parameter is selected on the CHANLS page. See Chapter 6 in the <i>Performance Guide</i> .
Master mode—	...enters the Velocity Map, Pressure Map, or Intonation Table Editor if the VelTouch, PressTouch, or Intonation parameter is selected.
Song mode—	...enters the Song Editor. The Song Editor is discussed in Chapter 12 in the <i>Performance Guide</i> . Enters the Program Editor if the Program parameter is highlighted when Edit is pressed.
Disk mode—	...has no effect.

**Soft Buttons**

Functions change depending on current display page. Function of each button is displayed on bottom line of display.

**EXIT Button**

Press to leave various editors. If you've made any changes while in the editor, you will be prompted to save them.

**Cursor Buttons**

Press the corresponding button to move the cursor up, down, left, or right in the display. Different parameter values will be highlighted as buttons are pressed.

**Alpha Wheel**

For data entry. Rotate clockwise to increase value of currently selected parameter, counterclockwise to decrease.

**Plus / Minus Buttons (- and +)**

Under the Alpha Wheel. Press to increase or decrease the value of the currently selected parameter by the smallest possible amount.

## Alphanumeric Pad

### ***For Numeric Characters***

Enter the value numerically instead of using the Alpha Wheel or Plus/Minus buttons. Press ENTER when finished. Press CANCEL to restore a parameter to its previous value. Pressing CLEAR is equivalent to pressing 0 without pressing ENTER.

### ***For Alphabetic Characters***

When naming objects, you can use the alphanumeric pad to enter letters instead of numbers. If you're renaming a program, for example, just position the cursor under the character you want to change, then press the corresponding numeric button, as labeled. Press the button as many times as necessary to enter the desired character. Pressing CLEAR will enter a space before the selected character. The "0" button will enter the numerals 0–9 when pressed repeatedly.

Here's an example. To enter the letter "C" in a blank space, press "1" three times. You can press the +/- button before or after entering the letter.

The CANCEL button is equivalent to the  soft button, and ENTER is the same as OK. The CLEAR button replaces the currently selected character with a space. The "+/-" button toggles between uppercase and lowercase letters.

When you press the +/- button on the alphanumeric pad, the currently selected character (the one with the cursor under it) will switch from upper case to lower case, and vice versa. The +/- button is a toggle; that is, if you switch from lower to upper case, all further entries will be in upper case until you press the +/- button again.

There are several punctuation characters available as well, but they can be entered only with the Alpha Wheel or Plus/Minus buttons. The punctuation characters are between "z" (lower case) and "0."

### **Special Alphanumeric Pad Functions**

When you're in Quick Access mode, the Alphanumeric pad can be used to select the entries in the current Quick Access bank. The layout of the alphanumeric pad corresponds to the layout of Quick Access bank entries as seen on the Quick Access mode page.

There's also a shortcut for selecting different QA banks while in QA mode. Just press the +/- or CLEAR button on the alphanumeric pad, and you'll be prompted to enter a bank number. Type the desired number on the alphanumeric pad, then press ENTER. The bank will be selected, and you'll return to the Quick Access page.

You can also use the alphanumeric pad to select strings to search for in the currently selected list of objects, and to enter new strings to search for. The search function is described fully in Chapter 3 in the *Performance Guide*.

Lastly, rack users can play notes from the numeric keypad by holding down the Cancel button while pressing alphanumeric buttons. This, too, is described fully in Chapter 3 in the *Performance Guide*.

### **The Display**

You may want to adjust the contrast of the display for different lighting conditions. The Contrast parameter in Master mode lets you set the contrast to your liking.

### **MIDI LED**

Lights when the K2500 is receiving MIDI information at its MIDI In port.

## Special Keyboard Functions

This section describes the buttons and sliders that are unique to the keyboard models of the K2500. Features common to both rack and keyboard models are described starting on page 1-1.

### Solo button

Mutes all zones in Setup except the current one. The button of the zone being soloed glows red.

### Mixdown button

Brings up the Mixdown screen, as shown below. From this screen you can choose how the K2500's physical sliders will function during MIDI mixdown. In the example below, the physical sliders A-H will control the volume level of MIDI channels 1-8. By pressing the **Pan** soft button, you would change the function of the physical sliders to control panning for channels 1-8; or, you could press the **9-16** soft button to have the physical sliders affect channels 9-16.

You can also use the cursor buttons to highlight the pan or volume control for a channel and use the alpha wheel or increment/decrement buttons to change the pan or volume level. In the screen below, for example, you could use the alpha wheel to control panning on channel 9 at the same time that you are using the physical sliders to control volume on channels 1-8.

Shows whether physical sliders control pan or volume. —>>

Shows which channels are affected by physical sliders.

Soft buttons for indicating which channels are affected by physical sliders.

### MIDI Faders button

When you press the MIDI Faders button, the K2500's physical sliders will take on the functions assigned on the current MIDI Faders page. From the MIDI Faders display you can define four different "pages" that define how the K2500's physical sliders will work. In the display shown below, for example, the eight sliders are each defined to send controller 6 (data) on the channels 9 through 16. Press one of the page soft buttons to use (or create) a different page of MIDI fader assignments. Use the **Send** soft button to transmit values without moving the faders.

The MIDI Faders pages will be saved with the Master table object.

```

MIDI Faders: Page2
Chan : 9   10  11  12  13  14  15  16
Ctl  : 6   6   6   6   6   6   6   6
Value: 0   0   0   0   0   0   0   0

      †   †   †   †   †   †   †   †
Page1 Page2 Page3 Page4 Send Done

```

### Assignable Controllers (buttons 1-8 and sliders A-H)

The function of these controllers will depend on how they've been defined within a setup.

#### SW1, SW2

The function of these controllers will depend on how they've been defined within a setup.

#### Record, Play/Pause, Stop

These buttons duplicate their namesake soft buttons in Song mode, allowing you to conveniently record, play, pause, and stop the current song.

## Special Button Functions

The mode buttons, as well as few of the other buttons, have additional functions, as described below. When you're in the Program or Setup Editor, they have special functions, as indicated by the green labeling under each button, and they also work as track mutes on the Mixer page of Song Mode.

<i>Program / Mute 1</i>	When you're in the Program Editor, this button will mute Layer 1 of the current program or the currently displayed layer for drum programs. While in the Setup Editor, it will mute Zone 1 of the current setup, if the setup has three or fewer zones; mutes current zone in setups with more than three zones. On MIXER page of Song mode, mutes either track 1 or 9.
<i>Setup / Mute 2</i>	When you're in the Program Editor, this button will mute Layer 2 of the current program, if any. For drum programs, solos currently displayed layer. While in the Setup Editor, it will mute Zone 2 of the current setup, if the setup has three or fewer zones; solos current zone in setups with more than three zones. On MIXER page of Song mode, mutes either track 2 or 10.
<i>Q Access / Mute 3</i>	When you're in the Program Editor, this button will mute Layer 3 of the current program, if any. For drum programs, solos currently displayed layer. While in the Setup Editor, it will mute Zone 3 of the current setup, if the setup has three or fewer zones; solos current zone in setups with more than three zones. On MIXER page of Song mode, mutes either track 3 or 11.
<i>Effects / FX Bypass</i>	When you're in the Program Editor, pressing this button will bypass (mute) the preset effect assigned to the current program, letting you hear just the sound of the layer(s) you want to hear. On MIXER page of Song mode, mutes either track 4 or 12.
<i>MIDI / Prev pg</i>	In the Program Editor, pressing this button will take you to the previously selected editing page. The K2500 remembers the four most recently selected pages, so you can press this button up to four times to backtrack through the pages you've viewed. Pressing it a fifth time will take you back to the ALG page. On MIXER page of Song mode, mutes either track 5 or 13.
<i>Master / Mark</i>	This is handy for marking Program Editor pages that you use frequently. Pressing this button will mark the currently selected page. You can mark as many pages as you like. Then you can use the Jump button to select the marked pages in the order you marked them. Marked pages will show an asterisk in the top line of the display, just before the name of the page. A marked page can be unmarked by pressing the Mark button while the page is visible. On MIXER page of Song mode, mutes either track 6 or 14.
<i>Song / Jump</i>	Use this button to jump to pages in the Program Editor that you've marked with the Mark button. This will cycle through all the currently marked pages in the order they were marked. On MIXER page of Song mode, mutes either track 7 or 15.
<i>Disk / Compare</i>	This button works in most editors, and lets you compare your edits with the original version of the object you're editing. When you press the Compare button, the display changes to remind you that you're listening to the original version. Press any button to return to the currently selected page of whatever editor you're in. On MIXER page of Song mode, mutes either track 8 or 16.
<i>Chan/Bank / Layer/Zone</i>	In the Program Editor, these buttons let you scroll through the layers in the currently selected program. In the Setup Editor, you can scroll through the zones. In the Effects Editor, you can scroll through the effect configurations. In the Quick Access Editor, they scroll through the entries in the currently selected Quick Access bank. In the Keymap Editor, they scroll through the velocity levels of multi-velocity keymaps. In Song mode, switches record track.
<i>Edit</i>	Whenever the selected parameter's value is an editable object or a programmable parameter, pressing the EDIT button will take you to that object's editor, or to the parameter's programming page.

## Special Button Functions: Double Button Presses

Pressing two or more related buttons simultaneously executes a number of special functions depending on the currently selected mode. Make sure to press them at exactly the same time.

<b><i>In This Mode:</i></b>	<b><i>These Buttons:</i></b> (Pressed simultaneously)	<b><i>Will Do This:</i></b>
PROGRAM MODE	<b>Octav-, Octav+</b>	Reset MIDI transposition to 0 semitones. Double-press again to go to previous transposition.
	<b>Chan-, Chan+</b>	Set current MIDI channel to 1.
	<b>Plus/Minus</b>	Step to next Program bank (100, 200, etc.)
MASTER MODE	<b>CHAN/BANK</b>	Enables Guitar/Wind Controller Mode.
SONG MODE	<b>left/right cursor buttons</b>	Toggle between Play and Stop.
	<b>up/down cursor buttons</b>	Toggle between Play and Pause.
	<b>Plus/Minus</b>	Select Quantize Grid values on MISC page and Edit Song:TRACK Quantize page. Select duration for a step on Edit Song:STEP page. Increment GateTime by 20% intervals on Edit Song: STEP page.
	<b>CHAN/BANK</b>	Select all tracks on any Edit Song:TRACK page.
DISK MODE	<b>2 leftmost soft buttons</b>	Issue SCSI Eject command to currently selected SCSI device.
	<b>CHAN/BANK</b>	Hard format SCSI device. List selected objects when saving objects.
	<b>left/right cursor buttons</b>	Select all items in a list. Move cursor to end of name in naming dialog.
	<b>up/down cursor buttons</b>	Clear all selections in a list. Move cursor to beginning of name in naming dialog.
PROGRAM EDITOR	<b>CHAN/BANK</b>	Select Layer 1.
KEYMAP EDITOR	<b>Plus/Minus</b>	With cursor on the Coarse Tune parameter, toggles between default Coarse Tune of sample root and transposition of sample root.
SAMPLE EDITOR	<b>2 leftmost soft buttons</b>	Toggle between default zoom setting and current zoom setting.
	<b>Plus/Minus</b>	Set the value of the currently selected parameter at the next <i>zero crossing</i> .

## Special Button Functions: Double Button Presses

<i><b>In This Mode:</b></i>	<i><b>These Buttons:</b></i> (Pressed simultaneously)	<i><b>Will Do This:</b></i>
ANY EDITOR	<b>Plus/Minus</b>	Scroll through the currently selected parameter's list of values in regular or logical increments (varies with each parameter).
	<b>2 leftmost soft buttons</b>	Reset MIDI transposition to 0 semitones. Double-press again to go to previous transposition.
	<b>Center soft buttons</b>	Select Utilities menu (MIDIScope, Stealer, etc.).
	<b>2 rightmost soft buttons</b>	Sends all notes/controllers off message on all 16 channels (same as Panic soft button).
	<b>left/right cursor buttons</b>	Toggle between Play and Stop of current song.
SAVE DIALOG	<b>up/down cursor buttons</b>	Toggle between Play and Pause of current song.
	<b>Plus/Minus</b>	Toggle between next free ID and original ID.

# Chapter 2

## Programs, Setups, and Keymaps

### K2500 Program List

The 200 preset programs in the K2500 are organized by instrument category. You will find a few representatives of each instrument sampled for the base ROM soundset, as well as synthesized instrument emulations, commonly used synthesizer timbres, and templates for new programming. We hope you find it a good starting point for your own work.

There are many ways to put expressivity and variety in a single program by assigning MIDI controllers to the various DSP functions in its layers. This list describes how each of the 200 factory preset programs can be modulated or altered by the various MIDI controls. Only those controls which may not be immediately evident are listed. Controls such as attack velocity and keynumber are understood to be assigned to most programs.

Prg #	Program Name	Mod Wheel	Data	MPress	Comments
<b>KEYBOARDS</b>					
1	Acoustic Piano				Soft Ped.
2	Stage Piano				Soft Ped.

## Setup List

The Performance Setup, or "Setup" is a combination of up to eight zones, each with independent MIDI channel and controller transmission assignments. Setups can be played on a K2500R via the Local Keyboard Channel feature: Find this parameter in MIDI mode on the RECV page, change it from None to a channel of your choice, and set your controller to send on only that channel. Now, any note that comes in on that channel will be re-mapped according to the display channel (in program mode) and according to the Setup (in Setup mode).

Below is a list of the Setups provided with V2 software; there are detailed descriptions on the pages that follow.

ID#	NAME	ID#	NAME	ID#	NAME
1	Sahara Touch	35	F1 Perc Comper	69	Digi Ensemble
2	Ethereal Split	36	Multi Chords	70	Pluck Stack
3	Slo Orchestra	37	3-Sec Talk sldrs	71	Quillmeister
4	Whirligig	38	FM Slider Play	72	Organ Select
5	Modern Harpsichord	39	E Grnd Pad	73	Perc Stack 2
6	Kogs & Things	40	BalladCompSplit	74	Action Scene
7	Desert Soil	41	Maggie May	75	Rusty Teeth
8	Mellow BigBand	42	EPnoPad rbnvel	76	Split Stack
9	Fusion Split	43	Dukes Up	77	Pulse Brass
10	Touch Rock Band	44	F1 Latin Comper	78	Majesty
11	Plucksynths	45	Floyd's Echo	79	Classy Orch
12	Big Pad RbnVel	46	Poly Portem	80	Motion Pad
13	Cembellophone	47	C2 and Lead	81	Wiry Comp 3-Sec

32	Sudden Horrors	66	Dual Synth		
33	Cisco Kid	67	C2 Jam		
34	ToyBuphone	68	Hertz		

## Version 2 Setups with Controller Assignments

To take advantage of Version 2's eight zone setup capability, there are 100 new setups in the Version 2 Factory Objects. You will find unique internal program combinations, arpeggiator examples, special ribbon and controller functions, and templates for user created setups. With as many as 24 assignable controllers shared among 8 independent zones, K2500 MIDI setups can be quite powerful, and they require some experimentation to find all their features and nuances. In order to make this process easier, many setups are programmed according to the certain conventions. The sliders generally provide mixing capabilities either as group faders or individual zone faders. They also provide control over timbre, effects mix, and clock tempo. Other conventions include:

Slider F: Arp Vel  
Slider G: Wet/Dry mix  
Slider H: Tempo  
PSw 1: Arp Switch  
PSw 2: Latch2  
Footswitch 1: Sustain  
Footswitch 2: Sostenuto  
Footswitch 3: Soft Pedal  
Large Ribbon: Aux Bend 1  
Small Ribbon Press: Mono Pressure  
Small Ribbon Pos: Aux Bend 2  
Mod Wheel: Mod Wheel  
MPress: MPress

MIDI notes can be triggered from many controllers including pedals, switches, sliders and the ribbons.

### Special Purpose Setups

There are three special setups at the end of the bank:

- 97 **Control Setup** lets you define controller assignments in program mode. You can customize and select the Control Setup on the MIDI Xmit page.
- 98 **Clear Setup** is a template for creating your own control assignments from a clear palette.
- 99 **Default Setup** lets you create your own setups from our common settings. The NewZn parameter uses this setup as its template for creating new zones.

The complete list of controller assignments for the setups in Version 2 is on the following pages.

## Programs, Setups, and Keymaps

Version 2 Setups with Controller Assignments

---

1	<b>Sahara Touch</b>	Sliders: A timbre, B-E zone faders; PSw: 1 arp sw, 2 mute group
2	<b>Ethereal Split</b>	Sliders: A port time for bass, B-E zone faders; PSw: 2 port sw for bass; FootSw: 1 sost & enables fretless bass, 2 enables drums
3	<b>Slo Orchestra</b>	Sliders: A-E zone faders; L Rib: cymbal roll; Press: cym roll vel
4	<b>Whirligig</b>	Sliders: A-F zone faders; L Rib: 1 aux bend, 2 pan, 3 pan
5	<b>ModernHarpsichord</b>	Sliders: A-E zone faders
6	<b>Kogs &amp; Things</b>	Sliders: A-E zone faders; PSw 2: group mute
7	<b>Desert Soil</b>	Sliders: A-C group faders, D timbre control, E detune; L Rib: pan
8	<b>Mellow BigBand</b>	Sliders: A-C zone faders
9	<b>Fusion Split</b>	Sliders: A-D zone faders
10	<b>Touch Rock Band</b>	Sliders: A-E group faders, F snare balance; PSw 2: group mute
11	<b>Plucksynths</b>	Sliders: A-F zone faders; L Rib: filter freq; PSw 2: group mute
12	<b>Big Pad RbnVel</b>	Sliders: A-C zone faders; L Rib: filter freq, pan, arp vel, & fx depth; PSw 2: group mute
13	<b>Cembellophone</b>	Sliders: A-E zone faders; L Rib: group mutes
14	<b>Mideast Drone</b>	Sliders: A-F group faders; L Rib: tempo
15	<b>Ribbon Thunder</b>	Sliders: A-C zone faders, D filter freq, H key vel for thunder; L Rib: thunder; ModWh timbral modulation
16	<b>Press Roll Orch</b>	Sliders: A-B zone faders; L Rib & MPress: arp vel for drum roll on keys G1 to F#2; PSw2: mute group
17	<b>C7 F7 G7 Groove</b>	Sliders: A-F group faders; FootSw: 1 crash cym, 2 ride cym; L Rib: pitch bend for bass; PSw: 1 arp latch, 2 panic
18	<b>Folk Comper</b>	Sliders: A zone fader, B group fader, C guitar timbre; PSw: 1 arp sw & zone mute, 2 latch2; L Rib: arp pan
19	<b>Extra Perc Drums</b>	Sliders: A-B group faders; Mod Wh: drum timbre
20	<b>Chiffer Lead</b>	Sliders: A-B group faders
21	<b>Slider Play 1</b>	Sliders: B velocity, C pitch bend, D pan, E expression; Slider A & L Rib: key num; PSw2: panic; FootSw2: latch2
22	<b>Mist Strings</b>	Sliders: A-C zone faders, D timbre, E pan
23	<b>New Pulsar</b>	Sliders: A-B group faders; PSw: 1 arp latch, 2 group mute
24	<b>It's Coming</b>	Sliders: A-D zone faders; FootSw1: arp latch
25	<b>SummerSnows</b>	Sliders: A-B group faders, C timbre; FootSw1: arp latch; L Rib: arp vel and pitch bend for bass
26	<b>OrchScape</b>	PSw: 1 group mute, 2 group mute
27	<b>Threeway XFade</b>	Slider A & L Rib: three way crossfade; Mod Wh: strings balance
28	<b>Royal Dyn Brass</b>	Sliders: A-B group faders, C release time
29	<b>Fairlite Stack</b>	Sliders: A-C group faders, D filter sweep, E key num, F key vel; PSw2: panic
30	<b>Mr. Wiz</b>	Sliders: A-B group faders; FootSw2: latch2; Mod Wh & L Rib: filter sweep
31	<b>New Dawn</b>	Sliders: A pad fade, B balance for pad and timbral modulation; L Rib: pad pan and pitch bend
32	<b>Sudden Horrors</b>	Sliders: A-C zone faders; L Rib: pitch bend and pan
33	<b>Cisco Kid</b>	Sliders: A-C group faders, PSw2: group mute; FootSw1: arp latch; L Rib: pan
34	<b>ToyBuphone</b>	Sliders: A-D zone faders
35	<b>F1 Perc Comper</b>	Sliders: A-B group faders; PSw1: arp latch

36	<b>Multi Chords</b>	Sliders: A-B group faders; L Rib: filter sweep
37	<b>3-Sec Talk Sldrs</b>	Sliders: A key num, B key vel; FootSw3: arp latch; PSw2: panic; L Rib Sect1 & Slider F: pitch bend; L Rib Sect2 & Slider C: timbre; L Rib Sect3 & Slider D: filter modulation speed
38	<b>FM Slider Play</b>	Sliders: B key vel, C pitch bend, D timbre, F expression; L Rib and Slider A: key num; PSw2: panic
39	<b>E Grand Pad</b>	Sliders: A-B group faders, C Pad balance; Higher velocity enables zones 3 and 4
40	<b>BalladCompSplit</b>	Sliders: A-B group faders, C release env & balance; L Rib: 1 bass pitch bend, 2 timbre, 3 bass timbre; FootSw3: mute zone 1
41	<b>Maggie May</b>	Sliders: A-C mute groups, D attack time; PSw2: mute group
42	<b>EPno Pad RbnVel</b>	Sliders: A-C zone faders; L Rib: arp vel, pan, fx depth, timbre; PSw1: arp sw & group mute
43	<b>Duke's Up</b>	Sliders: A-B zone faders, C pan; L Rib: arp vel
44	<b>F1 Latin Comper</b>	Sliders: A-C group faders, D timbre; FootSw2: group mute; L Rib: bass pitch bend; ModWh: extra perc enable; PSw1: arp latch
45	<b>Floyd's Echo</b>	Sliders: A-B group faders; ModWh: pitch transpose, tremolo, & mod
46	<b>Poly Portem</b>	Sliders: A port time, B-C group faders; PSw2: port enable
47	<b>C2 and Lead</b>	Sliders: A-E zone faders; PSw1: arp latch
48	<b>PowerLead</b>	Sliders: A port time, B staggered port time, C-F zone faders; L Rib: timbre and pitch bend; ModWh: timbre; PSw: 1 port switch, 2 momentary bend
49	<b>Big Synbrass</b>	Sliders: A-B group faders, C & E bass timbre, D comp timbre
50	<b>WahPedZawiSplit</b>	Sliders: A-E zone faders; L Rib: filter sweep (LH pad); S Rib: filter; PSw: 1 arp latch, 2 panic; FootSw4: modulation (zone 6); CC Pedal 1: filter sweep
51	<b>Clav EP Organ</b>	Sliders: A-C zone faders, D timbre (zone 2); PSw1: arp latch
52	<b>Toxic Cheese</b>	Sliders: A-C group faders; FootSw1: arp latch; L Rib: arp vel, pan (mallet sound), filter sweep freq/res
53	<b>Floyd Wheel</b>	Sliders: A-B group faders, C timbre; FootSw2: arp latch; L Rib: filter sweep & zone fader (zone 4); ModWh: filter sweep
54	<b>Under Water</b>	Sliders: A-C zone faders for zones 2-4, D detune piano & increase volume of pad, FootSw1: arp latch, L Rib: zone fader for arpeggiated zone
55	<b>Lullaby</b>	Sliders: A-B group faders; ModWh: filter sweep (strings); PSw2: octave transpose (flute and choir)
56	<b>Alazawilude</b>	Sliders: A-B group faders, E portamento time (RH lead); FootSw: 3 mute zone, 4 arp latch; ModWh: filter; PSw2: portamento switch (RH lead)
57	<b>Three Leads</b>	Sliders: A-B group faders, C decay time (flute), timbre (RH lead), L Rib: vibrato; ModWh: timbre
58	<b>News Room</b>	Sliders: A-E group faders, F key vel; FootSw2: latch2; L Rib: theramin & pitch bend; ModWh: filter sweep/res (bass)
59	<b>Aqua Ribbon</b>	Sliders: A-B zone faders, C filter sweep; L Rib: filter; PSw2: arp latch; ModWh: filter
60	<b>New Age Organ</b>	Sliders: A-C group faders, D timbre
61	<b>Drum Arps</b>	Sliders: A-B group faders, PSw1: arp latch
62	<b>Perc Stack</b>	Sliders: A-B group faders; FootSw4: arp latch; PSw2: mute zones 2&3 (percussives); Press: arp vel
63	<b>3-sec E Pno</b>	CC Pedal 1: filter; L Rib: 1 filter sweep, 2 tremolo rate, 3 tremolo amount; PSw2: arp latch

99	<b>Default Setup</b>	defaults

## Storing Objects in the Memory Banks

The number of available IDs differs between object types, and depending on whether you are storing the object to the Zeros bank or one of the other 9 banks.

OBJECT TYPE	NUMBER OF OBJECTS AND ID RANGE	
	IN ROM	IN RAM
Sample, Keymap, Program, Setup	100 1—99	100 200—299
	100—199	300—399 . . 900—999
A total of 999 objects of these types can be stored, 99 of each type in the Zeros bank, and 100 of each type in every other bank.		

Quick Access Banks, Songs, Velocity Maps, Pressure Maps, Intonation Tables	75 1—75	20 100—119
		200—219 . . 900—919
A total of 255 objects of these types can be stored, 75 of each type in the Zeros bank, and 20 of each type in every other bank.		

Preset Effects	37 1—37	10 100—109
		200—209 . . 900—909
A total of 127 preset effects can be stored, 37 in the Zeros bank, and 10 in every other bank.

## Effects Controller Numbers

The K2500 uses the Digitech 256 chip for its effects processor. When in Program Mode, the operating system allows you to assign any MIDI controller to Wet/Dry Mix plus two additional parameters related to the effect. (The choice of controllable parameters changes depending on the effect configuration. They are the parameters you see when you go to edit the effect.)

But if the FX Mode parameter on the Effects page is set to Master, then the remapping that takes place within the program is not applied. Instead, you use a predefined set of controller numbers. So to control the effects processor in real time when FX Mode is set to Master, you must use the following controller numbers.

To control the effects processor in this manner, press the EFFECTS button. Change FX Mode to Master, and set FX Chan to the channel you will use to send the controller info. (You can also send program changes on this channel to switch effects, so it is usually best to pick a channel that is not being used for notes.) These settings are remembered as long as the Power Mode parameter on the MIDI receive page is set to User. Otherwise, you will have to re-enter the settings each time you power up.

In the following chart, the parameters are grouped by Configuration. Multi FX will contain parameters found in more than one configuration.

### Ultimate Reverb

Decay time	77
Room volume	78
HF damping	14
Envelopment	32
Early Delay	29
Early Diffusion	30
Later Delay	n/a
Later Diffusion	93

## Note Numbers and Intonation Tables

### K2500 Note Numbers and MIDI Note Numbers

K2500	MIDI
C -1—B -1	0—11
C 0—B 0	12—23
C 1—B 1	24—35
C 2—B 2	36—47
C 3—B 3	48—59
C 4 (Middle C)—B 4	60—71
C 5—B 5	72—83
C 6—B 6	84—95
C 7—B 7	96—107
C 8—B 8	108—119
C 9—G 9	120—127

You can assign samples to keymaps in the range from C 0 to G 9. The K2500 will respond to MIDI events in the octave from C -1 to B -1. If a Note On event is generated in the range from C -1 to B -1, the K2500 will respond by setting the Intonation key correspondingly (C -1 will set it to C, C# -1 will set it to C#, etc.)

### Note Numbers for Percussion Keymaps

Most of the K2500's percussion programs have keymaps that place the various percussion timbres at standardized key locations. There are eight drum keymaps: Preview Drums, five 5-octave kits (two dry and three ambient), a 2-octave kit, and the General MIDI kit. The keymap 30 General MIDI Kit adheres as closely as possible to the General MIDI standard for placement of timbres. As a rule, programs that use this keymap can be assigned in percussion tracks for prerecorded sequences and will play appropriate timbres for all percussion notes.

The timbres are located consistently within the 5-octave kit keymaps so you can interchange keymaps within percussion programs freely without changing the basic timbres assigned to various notes (snare sounds will always be at and around Middle C, for example). The note assignments for the timbres in the 5-octave kit and 2-octave kit keymaps are listed below. MIDI note number 60 (Middle C) is defined as C 4.

#### 5-Octave Percussion Keymaps (C2 - C7)

MIDI NOTE NUMBER	KEY NUMBER	SAMPLE ROOT
36-37	C2-C#2	Low Tom
38-39	D2-D#2	Low Mid Tom
40-41	E2-F2	Mid Tom
42-43	F#2-G2	Hi MidTom
44-45	G#2-A2	Mid Hi Tom
46	A#2	Hi Tom
47-51	B 2—D# 3	Kick
52-54	E3—F#3	Snare (Sidestick)

## Note Numbers and Intonation Tables

### Note Numbers for Percussion Keymaps

55-56	G3-G#3	Low Snare (dual vel. on Dry Kit 1)
57-59	A3-B3	Mid Snare (dual vel. on Dry Kit 1)
60-61	C4-C#4	Hi Snare (dual vel. on Dry Kit 1)
62-64	D 4-E 4	Closed HiHat
65-67	F 4-G 4	Slightly Open HiHat
68-69	G# 4-A 4	Open HiHat
70-71	A# 4-B 4	Open to Closed HiHat
72	C 5	Foot-closed HiHat
73-74	C#5-D5	Low Crash Cymbal
75-78	D#5-F#5	Pitched Crash Cymbals
79	G5	Splash Cymbal
80	G#5	Ride Cymbal (Rim)
81-82	A5-A#5	Ride Cymbal (Rim and Bell)
83-84	B5-C6	Ride Cymbal (Bell)
85	C# 6	Cowbell
86	D 6	Handclap
87	D# 6	Timbale
88	E 6	Timbale Shell
89	F 6	Conga Tone
90	F#6	Conga Bass Hi
91	G 6	Conga Slap
92	G#6	Conga Bass Low
93	A 6	Clave
94	A# 6	Cabasa
95-96	B 6-C 7	Tambourine Shake

## 2-Octave Percussion Keymaps (C3 - C5)

MIDI NOTE NUMBER	KEY NUMBER	SAMPLE ROOT
48-49	C 3-C# 3	Kick
50	D 3	Low Tom
51	D# 3	Cowbell
52	E 3	Low Tom
53	F 3	Mid Tom
54	F# 3	Cowbell
55	G 3	Mid Tom
56	G# 3	Timbale
57	A 3	High Tom
58	A# 3	Snare (Sidestick)
59	B 3	High Tom
60-61	C4-C#4	Snare (dual velocity)
62	D 4	Closed HiHat
63	D#4	Ride Cymbal (Rim and Bell)
64	E 4	Closed HiHat
65	F 4	Slightly Open HiHat
66	F# 4	Crash Cymbal
67	G 4	Slightly Open HiHat
68	G# 4	Crash Cymbal
69	A 4	Open HiHat
70	A# 4	Crash Cymbal
71	B 4	Open to Closed HiHat
72	C 5	Foot-closed HiHat

## List and Description of Intonation Tables

1	Equal	No detuning of any intervals. The standard for modern western music.
2	Classic Just	Tunings are defined based on the ratios of the frequencies between intervals. The original tuning of Classical European music.
3	Just $\flat 7^{\text{th}}$	Similar to classic Just, but with the Dominant 7th flatted an additional 15 cents.
4	Harmonic	The perfect 4th, Tritone, and Dominant 7th are heavily flatted.
5	Just Harmonic	
6	Werkmeister	Named for its inventor, Andreas Werkmeister. It's fairly close to equal temperament, and was developed to enable transposition with less dissonance.
7	1/5th Comma	
8	1/4th Comma	
9	Indian Raga	Based on the tunings for traditional Indian music.
10	Arabic	Oriented toward the tunings of Mid-Eastern music.
11	1Bali/Java	Based on the pentatonic scale of Balinese and Javanese music.
12	2Bali/Java	A variation on 1Bali/Java, slightly more subtle overall.
13	3Bali/Java	A more extreme variation.
14	Tibetan	Based on the Chinese pentatonic scale.
15	CarlosAlpha	Developed by Wendy Carlos, an innovator in microtonal tunings, this intonation table flats each interval increasingly, resulting in an octave with quarter-tone intervals.
16	Pyth/aug4	This is a Pythagorean tuning, based on the Greek pentatonic scale. The tritone is 12 cents sharp.
17	Pyth/dim5	This is a Pythagorean tuning, based on the Greek pentatonic scale. The tritone is 12 cents flat.
18	Obj <i>vn.n</i>	Not an intonation table; indicates version number of K2500 ROM objects.

In general, you should select a non-standard intonation table when you're playing simple melodies (as opposed to chords) in a particular musical style. When you use intonation tables based on pentatonic scales, you'll normally play pentatonic scales to most accurately reproduce those styles. An excellent reference source for further study of alternative tunings is *Tuning In: Microtonality in Electronic Music*, by Scott R. Wilkinson.

## Note Numbers and Intonation Tables

List and Description of Intonation Tables

## Chapter 6

# Control Sources

Control sources are assigned as values for control source parameters, like Src1 and Src2, Depth Control for Src2, and LFO rate control. Assigning a control source to one of these parameters is like connecting control source outputs to various inputs on early modular synthesizers. You can think of each control source parameter as the input to a synthesizer module, and the values for those parameters as the outputs of modules generating control signals.

For the control sources to have an effect, two things have to happen. First, the control source must be assigned as the value for (patched to) a control source parameter like Src1. In other words, for a control source parameter to have an effect, it must be programmed to respond to a particular control message. Second, the control source must generate a signal. The level of the control source's signal determines how much effect it has on the control source parameter to which it's assigned.

In terms of generating signals, there are two types of control sources. The first, which might be called hardware control sources, require some physical movement to transmit them. The control source called MWheel (MIDI 01) is probably the most prominent example of this type of control source. When you move your MIDI controller's Mod Wheel, it sends a Modulation message (MIDI 01), unless you've programmed it to send something else. By default, when the K2500 receives a MIDI 01 message, it responds by sending a control signal to whatever control source is assigned as the value for the ModWhl parameter on the MIDI mode RECV page. Of course, you can program the Mod Whl parameter to send any available control source signal in response to MIDI 01 messages.

Some of these hardware control sources have physical controls "hard-wired" to transmit them. That is, there are certain physical controls that *always* generate these control signals. Every time you strike one of your MIDI controller's keys (or pluck a string, or whatever), for example, a Note on message is generated, along with an Attack velocity message. So any time you strike a key, any control source parameter that has AttVel assigned as its value will be affected by the Attack velocity message. Similarly, every time you move the physical Pitch Wheel, a PWheel message is generated. Whether this affects anything depends on whether you have assigned any control source parameters to respond to the PWheel message (in other words, whether any control source parameter has PWheel assigned as its value).

On the MIDI XMIT page (and in the Setup Editor) you'll find six parameters that correspond to the standard physical controls found on many keyboard controllers: Mod Wheel, Foot Switches 1 and 2, the Control Pedal (CPedal), the Controller Slider (Slider), and mono pressure (Press). As long as the LocalKbdCh parameter on the RECV page in MIDI mode matches the transmit channel of your MIDI controller, these parameters will always respond to specific MIDI control messages: ModWhl always responds to Modulation messages (MIDI 01); FtSw1 always responds to Sustain (MIDI 64); FtSw2 always responds to Sostenuito (MIDI 66); CPedal always responds to Foot (MIDI 04); Slider always responds to Data (MIDI 06); Press always responds to mono pressure.

The values you assign for these six parameters determine which control messages will be transmitted to the K2500 and to its MIDI Out port when you move the corresponding controls on your MIDI controller. If you look at the MIDI XMIT page, you'll see that the parameter called ModWhl has a default value of MWheel. You can interpret this as follows: "Moving the Mod Wheel on my MIDI controller sends the MWheel (Modulation, MIDI 01) message to the

K2500's sound engine, and, if the K2500's LocalKbdCh parameter matches my controller's transmit channel, to the K2500's MIDI Out port."

If you change the value of the ModWhl parameter, the Mod Wheel will no longer send the MWheel message, and any control source parameter with MWheel assigned as its value will no longer respond to movement of the Mod Wheel. All of the control assignment parameters on the MIDI mode XMIT page (and in the Setup Editor) can be programmed to send any of the MIDI controller numbers. For example, if you assign Foot (MIDI 04) as the value for the Press parameter, then generating mono pressure messages from your MIDI controller will send a Foot (MIDI 04) message to the K2500's sound engine, and will affect any control source parameter that has Foot assigned as its value. If the value for the K2500's LocalKbdCh parameter matches your MIDI controller's transmit channel, then in this case the Foot message will be sent to the K2500's MIDI Out port as well, when you generate mono pressure messages from your MIDI controller.

The other type of control source is independent of the movement of physical controls. These control sources generate their control signals internally, and might be called software control sources. They either run automatically (like A Clock and RandV1), or they're programmed to generate their signals according to parameters of their own (as with the LFOs and FUNs). The software control sources must have some non-zero value set for one or more of their parameters before they'll generate control signals.

To summarize, there are two different cases in which you'll assign control sources. One, the transmit case, determines what control message will be sent by a particular physical control. For example, MWheel is set by default to be transmitted by the Mod Wheel. The other case, the receive case, determines which control message will activate a particular control source parameter. For example, if you assign MPress as the value for the Src1 parameter on the PITCH page in the Program Editor, then that layer's pitch will be affected whenever an MPress message is generated by any physical control.

### Control Source Lists

There's one long list of control sources stored in the K2500's memory, although not all control sources are available for all control source parameters. With time you'll become familiar with the types of control sources available for various control source parameters.

The available list of control sources varies depending on the type of control source parameter you're programming. There are four basic types: MIDI control sources, local control sources, global control sources, and FUNs.

When you're setting the control assignment parameters on the MIDI mode XMIT page or in the Setup Editor, you'll see only the portion of the Control Source list that has values appropriate to MIDI controller messages. Consequently we refer to this subset of the Main Control Source list as the MIDI Control Source list.

You'll see variations on the Main Control Source list as you program the other control source parameters. We'll explain these variations, but it's not important that you memorize each variation. The lists differ to prevent you from assigning a control source where it would be ineffective. All you have to do is to scroll through the list of control sources available for any given control source parameter, and choose from the available values.

If you're programming one of the FUNs, you'll see the Main Control Source list, which includes almost every control source from the MIDI Control Source list (with the exception of Data Inc, Data Dec, and Panic, which belong exclusively to the MIDI Control Source list). The list for the FUNs also includes a set of constant values, that set an unvarying control signal level for one or both of the FUN's inputs.

For most other control source parameters, you'll see the Main Control Source list (without the FUN constants and the three special MIDI control sources we mentioned above). There are two

exceptions to this rule, which have to do with global control source parameters. Globals affect every note in each program's layer(s). Consequently they can't use local control sources as their values, since local control sources affect each note independently.

Four of the control source parameters are always global: the Enable parameter on the LAYER page (Program Editor), and the three control source parameters on the EFFECT page, (Program Editor). When programming these parameters, you'll see the Main Control Source list minus the three special MIDI control sources, minus the following local control sources:

Note St  
Key St  
KeyNum  
BKeyNum  
AttVel  
InvAVel  
PPress  
BPPress  
RelVel  
Bi-AVel  
VTRIG1  
VTRIG2  
RandV1  
RandV2  
ASR1  
LFO1  
FUN1  
FUN3  
Loop St  
PB Rate  
AtkSt  
Rel St

Finally, if you've turned on the Globals parameter on the COMMON page in the Program Editor, the available values for GLFO2, and the values for GASR2's trigger will lack the local control sources listed above, as well as the three special MIDI control sources and the FUN constants. The available values for GFUN2 and GFUN4 will exclude the same list of local control sources, but will include the FUN constants.

## Descriptions of Control sources

This section is organized into two sets of descriptions: the MIDI Control Source list, and the rest of the control sources. The numeral preceding the name of each control source can be entered on the alphanumeric pad to select the control source directly (press ENTER after typing the numeral).

Many of the MIDI control sources are assigned as default values for the control assignment parameters on the MIDI mode XMIT page and the Setup Editor page. We'll indicate these assignments as they appear, simply by mentioning that they're the default control source for a control assignment parameter.

## MIDI Control Source List

With a few exceptions, the MIDI control sources correspond to the standard MIDI controller numbers used by every MIDI device.

### **128      OFF**

This value eliminates the effect of any control source parameter to which it's assigned.

### **0, 33      MONO PRESSURE (MPress)**

Many of the K2500's factory programs are assigned to modify parameters such as pitch, filter cutoff frequency, and depth control when MPress messages are received. The mono pressure (Press) control assignment parameters in MIDI and Setup modes are set by default to transmit MPress messages when mono pressure messages are received from a controller.

### **1      MIDI 01 (MWheel)**

Many factory programs are assigned to respond to MWheel messages. The Mod Whl parameter in MIDI and Setup modes is set by default to transmit MWheel.

### **2      MIDI 02 (Breath)**

### **3      MIDI 03**

### **4      MIDI 04 (Foot)**

This is the standard MIDI controller number for continuous control foot pedals. It's the default value for the CPedal control assignment parameter, so a control pedal on your MIDI controller which sends MIDI controller 04 messages will send MIDI controller 04 messages to the K2500 by default.

### **5      MIDI 05 (PortTim)**

This is the standard MIDI controller number for portamento time control. The K2500 always responds to this control message. For any program that has portamento turned on (on the COMMON page in the Program Editor), MIDI Portamento Time messages received via MIDI will affect the rate of the program's portamento.

### **6      MIDI 06 (Data)**

MIDI 06 is the standard MIDI controller number for data entry. The Slider parameter on the MIDI mode XMIT page and in the Setup Editor is set by default to trans-

mit this message, and can be used to select programs and edit parameters on MIDI slaves if your controller can send it.

**7            MIDI 07 (Volume)**

This is the standard MIDI controller number for volume. The Volume parameter on the CHANLS page in MIDI mode will respond to MIDI controller 07 unless the VolLock parameter is turned on.

**8            MIDI 08 (Balance)**

**9            MIDI 09**

**10          MIDI 10 (Pan)**

MIDI controller 10 is defined as Pan control. The Pan parameter on the CHANLS page in MIDI mode will respond to MIDI controller 10 unless the PanLock parameter is turned on.

**11          MIDI 11 (Express)**

**12—14      MIDI 12—14**

**15          MIDI 15 (AuxBend2)**

The K2500 interprets MIDI controller 15 as AuxBend2, which is assigned by default to the short ribbon (below the pitch and mod wheels) on keyboard models of the instrument. A value of 64 is centered.

**16—19      MIDI 16—19 (Ctl A—D)**

**20          MIDI 20**

**21          MIDI 21 (AuxBend1)**

The K2500 interprets MIDI controller 21 as AuxBend1, which is assigned by default to the long ribbon (above the keyboard) on keyboard models of the instrument. A value of 64 is centered.

**22—31      MIDI 22—31**

**64          MIDI 64 (Sustain)**

This is the standard MIDI controller number for Sustain. The control assignment parameter FootSw1 is set by default to MIDI controller 64, so a switch pedal on your MIDI controller which sends MIDI 64 will send sustain messages to the K2500 by default. The K2500 will always respond to sustain messages by sustaining currently active notes.

**65          MIDI 65 (PortSw)**

This is the standard MIDI controller number for Portamento Switch. The Portamento parameter on the COMMON page in the Program Editor always responds to this controller, and will turn Portamento on for monophonic programs when the controller signal is at 64 or above. It won't affect polyphonic programs.

<b>66</b>	<b>MIDI 66 (SostPD)</b>  MIDI controller 66 is defined as Sostenuto Switch. The control assignment parameter FootSw2 is set by default to MIDI controller 66, so a switch pedal on your MIDI controller which sends MIDI 66 will send sostenuto messages to the K2500 by default. The K2500 will always respond to sostenuto messages.
<b>67</b>	<b>MIDI 67 (SoftPd)</b>  This is the standard MIDI controller number for Soft Pedal. The K2500 will always respond to Soft pedal messages.
<b>68</b>	<b>MIDI 68</b>
<b>69</b>	<b>MIDI 69 (FrezPd)</b>  The K2500 will always respond to this message. It causes all notes to be frozen at their current amplitude levels while the function is on.
<b>70—74</b>	<b>MIDI 70—74</b>
<b>75</b>	<b>MIDI 75 (LegatoSw)</b>  The K2500 always responds to this message. When a MIDI controller 75 message with a value above 64 is received, the K2500 will force polyphonic programs to be monophonic.
<b>76—79</b>	<b>MIDI 76—79</b>
<b>80—83</b>	<b>MIDI 80—83 (Ctl E—H)</b>
<b>84—90</b>	<b>MIDI 84—90</b>
<b>91</b>	<b>MIDI 91 (FXDep)</b>  The MIDI specification defines this controller as External Effects Depth. If the FX Mode parameter is set to Master, and the FX Channel parameter is set to a specific MIDI channel, the K2500 will respond to this message when it is received on the FX channel. It responds by adjusting the Wet/Dry mix of the current preset effect.
<b>92—95</b>	<b>MIDI 92—95</b>
<b>96</b>	<b>MIDI 96 (DataInc)</b>  This is defined as Data Increment. It's intended to be assigned to a switch control. When the control is on (value 127), the currently selected parameter's value will be increased by one increment. This could be assigned to FootSw2, for example, to scroll through the program list while in Program mode.
<b>97</b>	<b>MIDI 97 (DataDec)</b>  This is defined as Data Decrement. It's intended to be assigned to a switch control. When the control is on (value 127), the currently selected parameter's value will be decreased by one increment.
<b>123</b>	<b>MIDI 123 (Panic)</b>  The K2500 always responds to this message by sending an All Notes Off and All Controllers Off message on all 16 MIDI channels.

## Main Control Source List

This list contains all but the last three control sources in the MIDI Control Source list. It also contains the following control sources. All are local unless specified as global.

### **32 Channel State (Chan St)**

Chan St refers to whether any notes are currently active on a given MIDI channel. Chan St switches on whenever a note is started, and switches off when a Note Off has been received for each current note on that channel, even if notes are sustained.

### **33 Mono pressure (MPress)**

This is the same as the MPress control source in the MIDI Control Source list, but is assigned by entering 33 on the alphanumeric pad when used with a parameter that takes its values from the Main Control Source list.

### **34 Bipolar mono pressure (BMPress)**

This control source generates a control signal of -1 when the value of the control to which it's assigned is at its minimum, and +1 when the control is at its maximum. For example, if you had the MPress control assignment parameter assigned to send BMPress, and you had Src1 on a program layer's PITCH page assigned to BM-Press, with its depth parameter set to 1200 cents, then the layer would be transposed down an octave when no pressure (value 0) was applied to your controller's keys (assuming it sends mono pressure). Maximum pressure (value 127) would transpose the layer up an octave, while a pressure level of 64 would leave the pitch unchanged.

### **35 Pitch Wheel message (PWheel)**

The K2500 is hard-wired to respond to this message. Any parameter with PWheel assigned as its value will be affected when your MIDI controller's Pitch Wheel is moved.

### **36 Bipolar Mod Wheel (Bi-Mwl)**

This control source will always respond to MIDI controller 01 (MWheel). Control source parameters set to this value will generate control signals of -1 when the MIDI controller 01 message value is 0, and will generate a control signal of +1 when the MIDI controller 01 message is at 127, scaling all values in between. For example, you might set Src1 on a program layer's PITCH page to a value of Bi-Mwl, and its depth parameter to 1200 cents. Then as long as the ModWhl control assignment parameter is set to a value of MWheel, your controller's Mod Wheel will be bipolar; in this case it will bend the layer's pitch down as you move the Mod Wheel toward minimum, and bend the pitch up as you move the Mod Wheel toward maximum.

### **37 Absolute value of Pitch Wheel (AbsPwl)**

This control source always responds to movement of your MIDI controller's Pitch Wheel, but makes the Pitch Wheel unipolar. Whereas pulling the Pitch Wheel fully down usually generates a control signal value of -1, this control source generates a value of +1 when the Pitch Wheel is pulled fully down.

**38 Global ASR (GASR2)**

When the Globals parameter on the COMMON page is turned on, ASR2 becomes global, and is labeled GASR2. The functions of ASRs are explained in Chapter 6 in the *Performance Guide*, in the section “The ASR Page.” This control source does not appear in the Control Source list for parameters whose functions are local.

**39 Global FUN2 (GFUN2)**

When the Globals parameter on the COMMON page is turned on, FUN2 becomes global, and is labeled GFUN2. The functions of FUNs are explained in Chapter 16 in the *Performance Guide*. This control source does not appear in the Control Source list for parameters whose functions are local.

**40 Global LFO (GLFO2)**

When the Globals parameter on the COMMON page is turned on, LFO2 becomes global, and is labeled GLFO2. The functions of LFOs are explained in Chapter 6 in the *Performance Guide*, in the section “THE LFO PAGE.” This control source does not appear in the Control Source list for parameters whose functions are local.

**41 Global LFO Phase (GLFO2ph)**

When the Globals parameter on the COMMON page is turned on, LFO2 becomes global, and is labeled GLFO2. The functions of LFOs are explained in Chapter 6 in the *Performance Guide*, in the section “THE LFO PAGE.” This control source does not appear in the Control Source list for parameters whose functions are local.

**42 Global FUN 4 (GFUN4)**

When the Globals parameter on the COMMON page is turned on, FUN 4 becomes global, and is labeled GFUN4. This control source does not appear in the Control Source list for parameters whose functions are local.

**43 Volume Control (VolCtl)**

This control source will always respond to MIDI controller 07 messages. Assign this value to a parameter when you want MIDI volume messages to affect the parameter.

**44 Pan Control (PanCtl)**

This control source always responds to MIDI controller 10 messages. Assign this value to a parameter when you want MIDI pan messages to affect the parameter.

**45 Balance Control (BalCtl)**

This control source will always respond to MIDI controller 08 messages. Assign this value to a parameter when you want MIDI balance messages to affect the parameter.

**46 Channel Count (ChanCnt)**

This control source keeps track of the total number of active voice channels (how many notes are playing), and converts the number into a control signal between 0 and +1. The control signal’s value is 1 when all 48 voice channels are active, and 0 when no voice channels are active.

You can use this control source in several ways. One example is to limit the volume of each note so that you have a more nearly constant volume regardless of how

many notes you're playing (this is independent of the effect of attack velocity on volume). To set this up, you would go to the F4 AMP page in the Program Editor, and set the Src1 parameter to a value of ChanCnt. Then set the Depth parameter to a negative value. This will decrease the overall amplitude of each note as you play more simultaneous notes. This example works best with short-release sounds. It's great for an organ program, for example.

Channel count is also useful for controlling the modulation applied to a sound. For example, you may have a sound what you use both as a lead and for rhythm. Suppose you want a deep vibrato when you're soloing, but less vibrato when you're playing chords. Set up the vibrato by using LFO1 as the value for the Src2 parameter on the PITCH page in the Program Editor. Set the MinDpt parameter to 72 cts, and the MaxDpt parameter to 12 cts. Then set the value of the DptCtl parameter to ChanCnt, and You'll get maximum vibrato depth when only one note is active. (Channel count outputs a control signal of 0 when no notes are playing, so with only one note playing, its value is near 0, which causes the DptCtl parameter to generate a value near its minimum: 72 cents in this case.)

If you want to increase the depth of the vibrato as you increase the number of active notes, set the value of the MaxDpt parameter higher than that of the MinDpt parameter.

NOTE: There are no control sources that correspond to the numeric entries 47—54.

## **55      Sync State (SyncSt)**

This unipolar control source responds to MIDI clock messages received from an external MIDI device. Sync State switches on (+1) at each clock start, and switches off (0) with each clock stop.

## **56      A Clock**

This is a unipolar square wave that responds to MIDI clock messages. It switches to +1 and back to 0 with every clock beat. This control source looks first for externally received MIDI clock messages, and if none is received, it responds to the K2500's internal clock, which is always running. The internal clock speed is set with the Tempo parameter in Song mode.

## **57      Negative A Clock (~A Clock)**

This is the opposite of A clock, that is, it switches from 0 to +1 with every clock beat (the square wave is 180 degrees out of phase with that of A Clock).

## **58      B Clock**

This is similar to A Clock, but it's bipolar—it switches from +1 to -1 with every clock beat.

## **59      Negative B Clock (~B Clock)**

The opposite of B Clock, this bipolar control source switches from -1 to +1 with every clock beat (the square wave is 180 degrees out of phase with that of B Clock).

## **60, 61      Global Phase 1 and 2 (G Phase 1, G Phase 2)**

These bipolar global control sources are both rising sawtooth waves that rise from -1 to +1 with each MIDI clock beat. Like A Clock and B clock, they look for an external clock signal, and if none is received, they respond to the K2500's internal clock.

**62, 63      Global Random Variant 1 and 2 (GRandV 1, GRandV 2)**

These are also bipolar and global, and generate random control signal values between -1 and +1 when assigned to a control source parameter. There is a subtle difference in the randomness of the signals they generate, therefore choosing between them is a matter of preference.

**96            Note State (Note St)**

At any moment, any given note is either on or off; this is its Note State. Note State can be used as a unipolar control source that responds to each note that's played. It switches to +1 when the note starts, and stays on as long as the note is held on (by the sustain pedal, for example), or by holding down the trigger for that note. It switches to 0 when the note is no longer sustained by any means. For example, if you play a note, then hold it with the sustain pedal, its Note State is still on (+1) even if you've released the key that triggered the note. As soon as you release the sustain pedal, the note's Note State switches to off (0), even if it has a long release and you can still hear the release section of the note.

**97            Key State (Key St)**

This is a unipolar control source that responds to the motion of your MIDI controller's keys. It switches to +1 when a key is pressed, and switches to 0 when the key is released. Its effect differs from Note State in that when the key that switched it on is released, it will switch off even if the note is sustained. If you're using a non-keyboard MIDI controller, Key State will switch to 0 when the equivalent of a key release is sent.

**98            Key Number (KeyNum)**

This is a unipolar control source that generates its signal value based on the MIDI key number of each note triggered. That is, it generates a value of 0 in response to MIDI key number 0, a value of 64 in response to MIDI key number 64, and so on. Note that some parameters, such as Enable Sense on the Program Editor Layer Page, will not accept this parameter. GKeyNum, controller number 129, would be acceptable however.

**99            Bipolar Key Number (BKeyNum)**

This is like KeyNum, but generates a signal value of -1 in response to MIDI key number 0, a value of 0 in response to MIDI key number 64, and a value of +1 in response to MIDI key number 127.

**100          Attack Velocity (AttVel)**

This unipolar control source responds to Attack velocity values received at the K2500's MIDI In port. Velocity values of 0 cause it to generate a signal value of 0, while velocity values of 127 will generate a value of +1. All other velocity values will result in signal values proportionally scaled between 0 and +1. Note that some parameters, such as Enable Sense on the Program Editor Layer Page, will not accept this parameter. GAttVel, controller number 130, would be acceptable however.

**101          Inverse Attack Velocity (InvAttVel)**

This is the opposite of AttVel, generating a signal value of 0 in response to attack velocity values of 127.

- 
- 102 Polyphonic pressure (PPress)**  
This unipolar control source responds to poly pressure (aftertouch) messages received via MIDI. It generates a signal value scaled from 0 to +1 based on the poly pressure value range of 0—127.
- 103 Bipolar polyphonic pressure (BPPress)**  
This is like PPress, but scales its signal value from -1 to +1.
- 104 Release Velocity (RelVel)**  
Also unipolar, this control source scales its signal value from 0 to +1 in response to release velocity values from 0—127.
- 105 Bipolar Attack Velocity (Bi-AVel)**  
This is similar to AttVel, but scales its signal values from -1 to +1.
- 106, 107 Velocity Triggers 1 and 2 (VTRIG1, VTRIG2)**  
These unipolar control sources are switch controls, that is, they generate signal values of either 0 or +1. These must be programmed in order to have an effect; their programming parameters are found on the VTRIG page in the Program Editor. When a VTRIG's Sense parameter is set to normal, it switches to +1 when a note plays at a dynamic level exceeding the dynamic level set for its Level parameter. See "THE VTRIG PAGE" in Chapter 6 in the *Performance Guide* for more information.
- 108, 109 Random Variants 1 and 2 (RandV1, RandV2)**  
These are similar to GRandV1 and GRandV2, but are local, so will affect each control source parameter independently.
- 110, 111 ASR1, ASR2**  
These are programmable envelopes with three segments, Attack, Sustain, and Release. Their control source signals are unipolar. See "The ASR Page" in Chapter 6 in the *Performance Guide* for a thorough explanation.
- 112, 113 FUN1, FUN2**  
These generate their control source signals by combining the control signal values of two programmable inputs, and performing a mathematical function on the result. Their control signals can be unipolar or bipolar, depending on the control sources assigned as their inputs. See "The FUN Page" in Chapter 6 in the *Performance Guide*. FUN2 becomes global (GFUN2) when the Globals parameter on the COMMON page in the Program Editor is set to On.
- 114 LFO1**  
LFO1 can be unipolar or bipolar depending on the value set for the Shape parameter on its programming page. See "The LFO Page" in Chapter 6 in the *Performance Guide*.
- 115 LFO1 Phase (LFO1ph)**  
This bipolar control source generates its signal based on the cycle of LFO1. When the phase of LFO1 is 0 degrees, the signal value of LFO1ph is 0. When the phase of LFO1 is 90 degrees, the signal value of LFO1ph is 1. When the phase of LFO1 is 180
-

degrees, the signal value of LFO1ph is 0. When the phase of LFO1 is 270 degrees, the signal value of LFO1ph is -1.

**116 LFO2**

This functions exactly the same as LFO1, when the Globals parameter is set to Off (on the COMMON page in the Program Editor). When the Globals parameter is set to On, LFO2 becomes global (GLFO2).

**117 LFO2 Phase (LFO2ph)**

This functions exactly the same as LFO1ph, responding to the cycle of LFO2.

**118, 119 FUN3, FUN4**

These function exactly the same as FUNs 1 and 2, when the Globals parameter is set to Off (on the COMMON page in the Program Editor). When the Globals parameter is set to On, FUN4 becomes global (GFUN4).

**120 Amplitude Envelope (AMPENV)**

This programmable unipolar control source lets you vary the effect of a control source parameter over time. See “The AMPENV Page” in Chapter 6 in the *Performance Guide*.

**121, 122 Envelopes 2 and 3 (ENV2, ENV3)**

These are programmed in the same way as AMPENV, but they can be bipolar.

**123 Loop State (Loop St)**

This unipolar control source switches to +1 when the currently playing sample reaches its LoopStart point. If you’ve programmed a sound with a User amplitude envelope, Loop St will always be on (+1) for that sound. See Chapter 15 in the *Performance Guide* for more about sample loops.

**124 Sample Playback Rate (PB Rate)**

The signal value of this bipolar control source is determined by the sample playback rate of each note. The playback rate is a function of the amount of transposition applied to a sample root to play it at the proper pitch for each note. If you trigger a note where a sample root is assigned, the PB Rate signal value for that note is 0. If the note is above the sample root, the sample is transposed upward, and its playback rate is higher than that of the sample root. Consequently the PB Rate signal value for that note will be positive. If the note is below the sample root, the PB Rate signal value will be negative.

**125 Attack State (Atk State)**

This unipolar control source switches to +1 and back to 0 very quickly with each note start.

**126 Release State (Rel State)**

This unipolar control source switches to +1 when a note is released, and stays on until the note has completed its release (faded to silence), then it switches to 0. It will stay on if a note is sustained, even if its trigger (key, string, whatever) is released.

**127      ON**

This generates a constant control signal value of +1.

**128      -ON**

This generates a constant control signal value of -1 (the numeric entry 128 selects a value of OFF in the MIDI Control Source list).

**129      GKeyNum**

Uses the key number (global) to modify whatever it is patched into. Higher notes will have a very different effect than will lower notes. Users can use this new Source to control any K2500 parameters such as F/X depth, or to scale amplitude or pitch.

**130      GAttVel**

This is updated every time you strike another key (kind of a multi- trigger function). Users can patch this new Source to control parameters such as F/X Depth.

In addition to enabling (triggering) layers from any controller (works like an on/off switch), users may now set the assigned controller's threshold (value, or range of values from 0-127), thus defining the controller's active range where it will enable the layer.

For example, you could create a 32 layer nylon guitar where each layer is assigned to a different V.A.S.T. Algorithm and each layer is enabled by discrete narrow velocity ranges. This would produce 32 different sounding layers with 32 cross switch points emulating a picked guitar where no two attacks are exactly alike. If the layers' velocity ranges were very close together yet not overlapping, you could create very subtle non-repeating changes. This kind of power usually eludes most sample playback devices, as this technique uses only one layer of polyphony, due to cross switching versus cross fading.

**131, 132      GHiKey, GLoKey**

These control sources work the same as GKeyNum except that they track the highest key currently held and the lowest key currently held respectively. By using one of these as the only source for pitch tracking, you can create "mono-like" layers within a polyphonic program.

## Constant Control Sources

The remaining control sources are constants, which appear only when you're assigning control sources as inputs for the FUNs. Assigning one of these values fixes the input's control signal value at a steady level.

133	-0.99
134	-0.98

OFF

---

You can use the keyboard of your MIDI controller to choose control sources, since most key numbers correspond to a value on the control source list. If you have a certain control source that you use over and over (for example, LFO1), this can be the quickest way to enter its value. To do this: highlight a parameter which uses a value from the control source list, hold down ENTER, then strike the key corresponding to the control source you want to choose. LFO1, for example, is assigned to B5.

# Memory Upgrades and Other Options

### Program RAM vs. Sample RAM

If you're creating a lot of your own programs, and using samples loaded from disk, there are a few things you should be aware of to avoid perplexity. First of all, there's an important distinction between what we call Sample RAM and what we call Program RAM. Sample RAM refers to any SIMMs you may have had installed in your K2500. This RAM is reserved exclusively for sample storage; nothing else is stored there. Sample RAM is volatile; that is, when you power down your K2500, the data stored there will "evaporate" almost immediately. That's why you have to load RAM samples every time you power up.

The amount of sample RAM in your K2500 is indicated in the center of the top line of the Disk mode page. If the center of the display's top line is blank when you're on this page, it means that there is no sample RAM installed in your K2500 (or that the K2500 isn't recognizing it, in which case you should see your dealer or service center).

Program RAM is where all the other RAM objects you create (programs, setups, QA banks, songs, keymaps, etc.) are stored. The K2500 comes from the factory with approximately 240K of available Program RAM. The amount of free Program RAM is indicated at the right side of the top line of the display in Song mode and Disk mode. You can add a Program RAM (P/RAM) option to increase your total available Program RAM to about 1250K. Ask your dealer.

Program RAM is battery-backed, so anything that's stored there will be preserved even when you power down (as long as your batteries have enough juice). Fresh alkaline batteries will last up to two years, so you'll have very few worries about losing your RAM program information. Nonetheless, we recommend that you back up your programs, songs, etc. by saving them to disk. This offers insurance in case the RAM becomes corrupted. This is unlikely, but still a possibility.

If you create a program that uses a disk-loaded sample, the program information (number of layers, keymap assignment, output group, algorithm, etc.) is stored in Program RAM. All RAM samples associated with the program are stored in Sample RAM. This means that when you power down, the RAM samples associated with your programs will disappear. The program information, however, will remain in Program RAM indefinitely. When you power up again, your RAM programs will still appear in the display as you scroll through the program list, but they won't play if they use RAM samples, because the RAM samples are lost when you power down.

### Viewing RAM Objects

If you're a heavy Disk mode user, you'll often be faced with the decision to overwrite, merge, or append objects when you load files from disk. If you're loading into a memory bank that's nearly full, this can be a tricky call, because if you decide to merge or append, there may not be enough open slots in the memory bank to accommodate the objects you load. In this case, the extra objects will be loaded into the next-higher memory bank.

Things get even trickier if you save dependent objects when you save to disk. (A dependent object is any object that's associated with another object stored in a different memory bank—for example, a RAM sample with ID 301 that's used in a program with ID 200. See the discussion of dependent objects in Chapter 13 in the *Performance Guide*.) If you load a file that contains a number of dependent objects, some of them may be loaded into a higher memory bank than

the one you specified in the Bank dialog before you loaded the file. A quick way to see where the objects you loaded ended up is to use the "Objects" Utility function in Master mode.

Select Master mode and press the **Utility** soft button. Press the **Objects** soft button, and a list of RAM objects will appear. Use the Alpha Wheel to scroll through the list of objects. You'll see the type, ID, name, and size (in bytes) of each object.

## Choosing SIMMs for Sample RAM

Single In-Line Memory Modules, commonly referred to by the acronym "SIMM", are the small memory cards that the K2500 uses for Sample RAM. You can add up to eight SIMMs to your K2500, and since they range in available size up to 16 Megabytes, that means you can add up to 128 Megabytes of Sample RAM to your machine.

The K2500 will accept 30-pin non-composite SIMMs, in sizes of 1 Megabyte, 4 Megabytes, and 16 Megabytes, in either 8-bit or 9-bit configurations. The SIMMs must have an access time of 80 nanoseconds (ns) or faster. The maximum height and width of a SIMM for the K2500 is 30mm x 90mm (approximately 1.2 inches x 3.5 inches). Below is a list of some SIMMs that will work with your K2500:

Hitachi HB56A48A; 4Mx8  
Hitachi HB56A49A; 4Mx9  
TI TM124EU9B, TM124EU9C; 1Mx9  
TI TM497EAD9B, TM4100EAD9; 4Mx9  
TI TM4100GAD8, TM497GAD8A; 4Mx8  
TI TM16100GBD8;16Mx8  
TI TM16100EBD9;16Mx9  
NEC MC-421000A8B; 1Mx8  
NEC MC-424100A8B; 4Mx8  
NEC MC-421000A9B; 1Mx9  
NEC MC-424100A9B; 4Mx9  
Tosh THM81000AS, Tosh THM81000BS, Tosh THM81070AS; 1Mx8  
Tosh THM91000AS, Tosh THM91000BS, Tosh THM91070AS; 1Mx9

SIMMs are always installed in adjacent pairs, and must be installed by an authorized Kurzweil facility.

**CAUTION:** You must not use composite SIMMs in your K2500. A composite SIMM is one that uses a PAL or other additional circuitry to make multiple DRAM chips act like bigger chips. Non-composite SIMMs (the kind you may use in your K2500) have no chips other than DRAM memory chips soldered to the board. SIMMs with PALs, buffers, or other logic components will not work in your K2500, and must not be used.

## Using Headphones with the K2500

A good pair of headphones can be indispensable when you want to play but need to keep the volume down. You'll get optimum performance from headphones with at least 50 ohms impedance, but anything over 8 ohms is adequate. Headphone volume decreases as the impedance decreases.

## Chapter 9

# Maintenance and Troubleshooting

### Preventive Maintenance

With a modicum of care, your K2500 will give you years of use and enjoyment. There are just a few important points to keep in mind.

Proper installation is essential to the health and welfare of your K2500. It should be mounted in a standard 19-inch MIDI rack, or should rest on a hard flat surface. In this case it *must* rest on its rubber feet, and **NOT** on the bottom panel. **NEVER** block the ventilation openings on the rear panel; doing so can cause overheating that will seriously damage your K2500! To provide adequate ventilation, the rear panel should be at least four inches from any vertical surface. If you install an internal hard disk, the ventilation opening on the underside of the K2500 must remain unobstructed so the cooling fan can operate properly. Care should be taken to minimize the amount of dust in the environment.

There are no user-serviceable parts in the K2500. Under no circumstances should you attempt to remove any panels (except for battery replacement). If you attempt to open your K2500, you'll risk electric shock, and you'll void your product warranty.

#### Cleaning your K2500

It's a good idea to remove dust from your K2500 occasionally. You may also want to remove fingerprints. You can clean the K2500's front panel with a soft damp cloth, and use a mild soap or detergent. Never use strong cleaners or solvents, and never spray anything on the front panel or into the ventilation holes! Any cleaners you may want to use should be applied to your cleaning cloth; you can then carefully wipe the surfaces of the K2500.

#### Floppy Disk Drive Maintenance

As long as you're reasonably careful to keep dirt and dust out of the floppy disk drive, you shouldn't have any problems. If, however, you start to experience errors or failures in loading or saving, it may be due to dirt in the floppy drive mechanism. See your dealer for information regarding products and techniques for floppy drive cleaning.

### Battery selection and Replacement

The K2500 uses batteries to preserve its internal memory when the power is turned off. The original batteries should last up to two years before they need replacing. Replacement is necessary when the LCD says "BATTERY VOLTAGE IS LOW" during power-up, or when you notice that the LEDs flash three times instead of once during power-up. Once these warnings begin to occur, the batteries should be replaced within a couple of weeks to ensure continued safety of your RAM objects.

To replace the batteries, you'll need access to the rear panel. Remove the battery compartment cover, which is located at the lower right corner of the rear panel as you face it. You may wish to use a small screwdriver. Replace the batteries with three high quality AA size "heavy duty" or alkaline batteries. A capacitor will keep the memory alive for about 30 seconds while changing the batteries, so don't remove the old ones until the new ones are available. Alternatively, it is permissible to have the power cable plugged in and the power on while changing the batteries, in which case memory will be retained as long as power is on. Be sure to insert the new

batteries in the proper direction (the positive terminals should be pointing out). Incorrect insertion won't damage anything but the memory won't receive any power from the batteries.

Most quality brand-name batteries now have "sell by" dates printed on their package. Carbon-zinc batteries will last for at least a year after installation while alkaline batteries should last for at least 2 years provided they are installed before the date on the package. Rechargeable batteries should not be used; the K2500 will not recharge them and their life after charging on an external charger will be only a few months. Battery life is not significantly increased by leaving your K2500 on all the time; batteries may even suffer heat degradation if the K2500 is left on continuously.

## User-callable Diagnostics

There's an onboard diagnostic program that will enable you to check your battery and confirm front panel button functions.

To enter the diagnostic program, simply press the 4, 5, and 6 buttons all at once when in Program Mode. The K2500 will respond by lighting each LED in sequence and then displaying text such as the following on the LCD:

```
K2500 SCANNER DIAGNOSTICS VERSION 2.1
(PRESS "EXIT" AND "ENTER" TO EXIT)
BATTERY=4.3VOLTS, WHEEL CENTER=128
XXXXXXXXXXXXXXXXXXXX
```

The battery voltage and wheel center values may be different on your unit. You can ignore the Wheel Center reading; it doesn't apply to the K2500. The fourth line (represented by XXXX) gives a readout identifying the buttons you press.

The diagnostic program can also be used to check out the front panel components. If you move the Alpha Wheel clockwise, the numbers will go 0-1-2-3-0-1-2...while counterclockwise should produce 3-2-1-0-3-2-1... If you press a button, its name will be shown and if it is one of the mode buttons, its associated LED should flash.

The third line of the display shows the results of two measurements that are made whenever your K2500 is turned on. The battery voltage will be about 4.3 volts for new batteries, gradually declining over time to 3.2 volts, at which point you will begin to receive warnings (see "Battery Selection and Replacement" above). The line referring to the Wheel is only relevant to the keyboard models of the K2500.

## Maximizing Music and Minimizing Noise

Your K2500 quite possibly has the lowest noise and widest dynamic range of any instrument in your studio. The following tips will enable you to make the most of this, and optimize the K2500's audio interface to your other equipment.

Setting your audio levels appropriately is the key to optimizing the signal-to-noise ratio of any piece of equipment. You may have noticed that the K2500's output signal seems less "hot" than most other synths when using the unedited factory sounds. This is to allow virtually any configuration of voice assignment to be used (up to 96 oscillators directed to one output!), and played very loudly with almost no chance of overload distortion. For more controlled

adjustments, it's best to increase the output level *digitally* (by editing programs) instead of increasing the gain of your amplifier or mixing board. This is because a digital gain increase is completely noiseless whereas an analog increase will proportionally increase hum and noise from the connecting cabling and from the K2500 itself.

Increasing the volume digitally can be accomplished in three different ways. You can increase the volume of all programs assigned to a given MIDI channel by selecting the CHANLS page in MIDI mode and setting the OutGain parameter to the desired level (in 6dB steps). For multi-timbral sequences (on multiple MIDI channels), you will need to do this for each channel. Alternatively you can increase the volume of a single program by going to the OUTPUT page in the Program Editor and setting the Gain parameter to the desired level, again in 6dB steps. For finer adjustment, the Adjust parameter on the F4 AMP page can be used.

Increasing the level too much can cause clipping distortion when multiple notes are triggered with high attack velocity. For dense sequences all played through the same outputs, you will probably only be able to increase the volume by 6dB or so without risk of distortion. For monophonic instruments (lead guitar) or single instrument tracks (such as drums), a substantially greater boost is generally possible.

For the absolute maximum signal quality, the individual outputs should be used. These are connected almost directly to the 18-bit digital-to-analog converters with a minimum of noise-inducing processing circuitry. A total dynamic range of over 100dB is available at these outputs. The MIX outputs are naturally somewhat noisier because they represent the noise of the individual outputs all mixed mixed together, and the signal must travel through more circuitry to reach them.

Programs that are routed through the K2500's global effects processor (Output Group A) will also be slightly noisier than programs routed to Output Groups B, C, or D. As with an external effects unit, maximizing the input signal level (using the methods described above) will improve the signal-to-noise ratio of the effects processor. When in Effects mode, you'll see an internal Wet/Dry mix parameter; in the Effects Editor you'll find numerous parameters for setting the level of the various effects. Your best signal-to-noise ratio will be achieved by setting the effects level parameters to maximum and adjusting the Wet/Dry Mix parameter to set the overall effects mix. If you are only using the effects unit for EQ functions, one of the EQ or Tone Control functions accessible through the Program Editor will produce quieter results than the global effects processor's EQ functions (Parametric EQ, Para Bass, Para Mid, or Para Treble, for example).

## Ground Hum

A common problem with all electronic musical gear is the hum that can occur in connecting cables due to AC ground loops. Although "3-prong to 2-prong" AC adaptors are frequently used to break ground loops, they also break the safety ground that protects you from electric shock. **Using these adaptors is dangerous, and SHOULD NOT be done!** Furthermore, although using these adaptors may reduce low-frequency hum, high-frequency line noise (such as motor switching noise) is likely to get worse in this case, since the K2500's AC noise filter will have no outlet for the noise it filters if you disable the ground.

To reduce ground hum, you can increase your output signal levels as described earlier in this section. Other safe procedures include plugging your mixing board and amplifier into the same outlet as your K2500, and making sure that all your gear is properly grounded. If you're using an external SCSI device, plug it into the same outlet as well. AC isolation transformers are extremely effective at eliminating ground loops, and are recommended for critical installations. A 75-watt transformer is sufficient for the K2500.

For studio applications, where the utmost signal purity is required, using audio unbalanced-to-balanced line transformers will give you the best results. Each of the K2500's audio outputs can easily drive a 600-ohm transformer.

Finally, magnetic fields can be a source of interference. The area surrounding the K2500's Alpha Wheel and alphanumeric pad is sensitive to fields from large transformers in power amps; keep them at least a foot away from the K2500's front panel. Smaller gear like drum machines and hardware sequencers can also cause interference.

## Power Problems and Solutions

The K2500 is quite tolerant of voltage fluctuations, noise, and transients in the AC power it receives. The input line filter and grounded power cable will protect against even large amounts of noise from motors and the like while the built-in filter coupled with the fuse will protect against all but the largest transients. If your installation is actually suffering from line noise or transients, most likely your other equipment will be suffering more than your K2500.

Very low line voltage or severe voltage dips are a problem for any computer-based instrument. When the K2500 is set for 120 volt input (the normal North American setting), it should function down to 90 volts. If the line voltage drops below 90 volts, a special circuit halts all activity to protect against software crashes or damage. When the line voltage returns to and stays at an acceptable level for at least one second, the computer will automatically restart. The net effect is just as if you had performed a soft reset. Continuous low line voltage or transient dips will never produce symptoms other than unexpected soft resets as just described. Any other problems such as distortion, disk errors, or lost data are caused by something other than line voltage fluctuations.

Soft resets from line voltage dips are most common. These are easily identified because the reset occurs coincident with the building lights dimming, stage lights or power amps being switched on, or air-conditioning equipment starting up. The solution in all cases is to get a more direct connection between your K2500 (and any other computer-based equipment) and the building's power. Floodlights, large power amplifiers, and motor-operated devices should use a separate extension cord; preferably they should be plugged into a separate outlet.

Chronic low line voltage is best confirmed by measurement. Readings below 100-105 volts mean that even small dips could cause resets, while readings below 95 volts (accounting for meter inaccuracies) are a definite problem. Again, the best solution is to separate your heavy lighting and amplifier loads from your K2500 and other synths on separate extension cords or separate circuits when possible. If the actual building voltage is that low, use of an external step-up transformer or voltage regulator is recommended. We DO NOT recommend changing the line voltage selector to 100 volts (or 220 volts in Europe) because overheating or blown fuses may occur if you leave the K2500 at the lower setting and use it later at a normal voltage level.

## Troubleshooting

Naturally, we've done everything possible to ensure that your K2500 arrives free of defects. And there's a good chance that there's nothing wrong, even if you're not seeing the proper display or hearing the sounds. Carefully check the following things:

Make sure that your power supply is at the right voltage, and is functioning properly.

Make sure the power cable is connected properly.

Adjust the display contrast if necessary (with the Contrast parameter in Master mode). If for some reason you have trouble reading the display, even after adjusting the Contrast parameter, you can also adjust the contrast by holding down the ENTER button and turning the Alpha Wheel. If this improves the contrast, immediately return to the Contrast parameter and adjust it slightly. This will cause the K2500 to remember the current display contrast level, and should take care of any difficulties you may have been having. If this procedure doesn't work, it's time to contact your dealer.

Make sure your audio cables are fully connected to the K2500 and to your sound system. You may want to switch your audio cables, unless you're sure they're functioning properly.

Make sure that your MIDI connections are correct, and that your MIDI cables are functional. You should have at least one MIDI cable, which should be connected from the MIDI Out port of your MIDI controller to the MIDI In port of the K2500.

Check that the K2500's Volume slider is at least partially up.

Check the volume level of your sound system.

Lower the volume of your sound system, and turn the K2500 off, then on again (this is called a power cycle).

Press the +/-, 0, and Clear buttons (on the alphanumeric pad at the far right of the front panel) at the same time. This is called a soft reset.

As a last resort, save to disk any RAM objects you've created, and perform a hard reset. Do this by pressing the Master Mode button, then pressing the "Reset" soft button (at the lower right of the display). The K2500 will warn you about deleting everything (only RAM objects will be deleted). Press Yes. After a few seconds, the power-up display should appear.

Also check the suggestions on the following pages. If it's still not happening, the next step is to shut off the power and call your dealer.

## Other Possible Problems

Condition	Possible Cause
<i>No sound, no display, no LEDs illuminated.</i>	<ol style="list-style-type: none"> <li>1 AC line cord not fully inserted into outlet or unit. If using a multiple outlet box, check its plug.</li> <li>2 Power not on at AC power source (wall outlet). Check with a different appliance.</li> <li>3 Power switch not on (either the unit or multiple outlet box).</li> <li>4 Incorrect voltage selection setting. REFER TO QUALIFIED SERVICE PERSONNEL.</li> </ol>
<i>No sound.</i>	<ol style="list-style-type: none"> <li>1 Volume control turned all the way down on the K2500 or on amplifier or mixer.</li> <li>2 Amplifier or mixer not turned on.</li> <li>3 Cabling is not correct - see Chapter 2 in the <i>Performance Guide - Startup</i>, and Chapter 18 in the <i>Performance Guide - Audio Outputs</i>. Also check that amplifier, mixer and speaker cabling is correct.</li> <li>4 MIDI volume has been assigned to a control source which has sent a value of 0. Pressing the Panic soft button will reset all controls, and resolve this problem.</li> </ol>
<i>No sound at MIX outputs or headphones.</i>	<ol style="list-style-type: none"> <li>1 Audio cables are plugged into some or all of the separate outputs. Cables plugged into of the separate outputs will remove some or all of the audio signal from the MIX and headphone outputs. See Chapter 18 in the <i>Performance Guide</i>—"Audio Output" for output configurations.</li> </ol>

*Left MIX output seems louder than Right MIX output when used individually.*

- 1 This is normal. When a cable is plugged into the left MIX output alone, both the left AND the right audio signals are routed to the jack. When a cable is plugged into right MIX output alone, only the right channel audio signal is heard.

*Volume knob has no effect.*

- 1 Separate outputs are in use - the volume knob does not affect the separate outputs.
- 2 MIDI volume has been assigned to a control source which has sent a value of 0.

*Programs, Setups, Songs, etc. are missing.*

- 1 Batteries have run down or have been disconnected. If the batteries have failed, the message "Battery voltage is low - X.X volts" (where X.X is less than 3.0) will appear in the display on power-up. All user data will be permanently lost if this occurs. See the information on battery selection and replacement elsewhere in this manual.

*LCD is too dark or too light to read.*

- 1 Contrast not adjusted. Select Master mode and adjust the Contrast parameter. If this fails, hold the ENTER button and turn the alpha wheel clockwise to make display darker; counterclockwise to make it lighter. Then adjust the Master mode Contrast parameter to a higher value if the LCD was too light, or to a lower value if it was too dark.

*Cannot mount or read disk.*

- 1 Disk is not MS-DOS (or Akai, Ensoniq, or Roland) format.
- 2 Disk is damaged.

*Cannot write floppy disk.*

- 1 Disk is not MS-DOS formatted.
- 2 Disk write protected.
- 3 Sample is copy protected.
- 4 Disk is damaged.

*Cannot format disk.*

- 1 Disk is damaged.
- 2 Disk is write protected.
- 3 You have instructed the K2500 to format a Double density (720K) disk as a high-density (1.4M) disk. NOTE: Punching a hole in a double-density disk case to try to make the K2500 read it as a high-density disk is not recommended.

# Chapter 10

## MIDI, SCSI, and Sample Dumps

### SCSI Guidelines

The following sections contain information on using SCSI with the K2500, as well as specific sections dealing with the Mac and the K2500.

#### Disk Size Restrictions

The K2500 accepts hard disks with up to 2 gigabytes of storage capacity. If you attach an unformatted disk that is larger than 2 gigabytes, the K2500 will still be able to format it, but only as a 2 gigabyte disk. If you attach a *formatted* disk larger than 2 gigabytes, the K2500 will not be able to work with it; you could reformat the disk, but this - of course - would erase the disk entirely.

#### Configuring a SCSI Chain

Here are some basic guidelines to follow when configuring a SCSI chain:

1. According to the SCSI Specification, the maximum SCSI cable length is 6 meters (19.69'). You should limit the total length of all SCSI cables connecting external SCSI devices with Kurzweil products to 17 feet (5.2 meters). To calculate the total SCSI cable length one must add up the lengths of all SCSI cables, plus 8" for every external SCSI device connected. No single cable length in the chain should exceed 8 feet.
2. The first and last device in the chain must be terminated.

The K2500 comes with SCSI termination enabled. You must disable this termination if the K2500 will be in the middle of a SCSI chain or if you are installing a hard drive into the K2500.

There are three ways to disable the K2500's termination, depending on the manufacture date of the unit. Newer K2500's have an external "SCSI Termination Enable/Disable" switch on the rear panel. Older K2500's require either the removal of SCSI termination resistors or a jumper setting; these modifications can only be performed by an authorized service center.

Poor termination is a common cause of SCSI problems. Having more than two terminators on the bus will overload the bus drivers, but this should not cause permanent damage to the hardware. Poor termination can corrupt the data on your disk, however, as can bad SCSI cables.

For the K2500R, if it is not located at one end of a SCSI chain all internal termination, including the terminator resistor network on the K2500 Engine Board plus terminator resistors in the internal SCSI drive must be removed. It is much simpler to just make sure that the K2500 is at one end of the SCSI chain.

For a K2500 keyboard model, it must be at the end of the SCSI chain if it has an internal disk drive.

A note about active termination - The K2500 uses active termination of the SCSI bus. Active termination has some benefits over traditional passive termination. Some people have positioned active termination as a panacea for SCSI problems, but this is more hype than reality. Active terminators are available to be used at the end of one's SCSI chain and

all APS SR2000 series external drives use internal active termination that can be switched on or off.

3. Each device in the chain (including internal hard drives) must have its own unique SCSI ID. The default K2500 ID is #6. Macintoshes use ID #7 & #0.
4. Use only true SCSI cables - high quality, twisted pair, shielded SCSI cable. Do not use RS432 or other non SCSI cables.

The majority of SCSI cables we've tested were poorly made and could damage data transferred to and from the disk. Nearly all the SCSI data problems Young Chang's engineering department has had have been due to bad cables that didn't twist pairs of wires properly. Correctly made SCSI cables have one ground wire for every signal wire and twist them together in signal/ground pairs. Cables made by APS Technologies (800-233-7550) are very good and are highly recommended. Young Chang manufactures 1 and 2 meter 25-25 SCSI cables, that we can also recommend. Good cables are essential to reliable data transfers to and from the disk drive.

5. You should buy all SCSI cables from a single source to avoid impedance mismatch between cables.
6. Theoretically all eight SCSI IDs can be used. However, feedback from users has shown us that many people have problems with more than 5-6 devices in a chain. If you have 7 or 8 devices and are having problems, your best bet is to make sure you have followed all of the previous information, especially with respect to cables.
7. Connect all SCSI cables before turning on the power on any equipment connected by SCSI cables. Plugging or unplugging SCSI cables while devices are powered on can cause damage to your devices or instrument.
8. Authorized service centers should remove termination from the K2500 when installing an internal drive, set its ID correctly, and terminate the drive.
9. When using a Macintosh, power up the K2500 and other devices first.
10. The K2500 file format is a proprietary format; no other device will be able to read or write a Kurzweil file.
11. The floppy disk format of the K2500 is DOS. The SCSI disk format is a proprietary form that is close to DOS, but it is not DOS. Nonetheless, the K2500 can read and write to a DOS formatted disk provided it was formatted on the PC with no partitions.
12. It is possible to view, copy, move, name, delete files on a K2500 formatted floppy disk or removable media hard drive, with a PC or Macintosh running a DOS mounting utility program such as Access PC.
13. As long as the SCSI bus is properly terminated there is no way you can damage your hardware simply by operating it. There are a few hazards K2500 users should be aware of, however:

The only damage that usually occurs to SCSI hardware comes from static electricity "zapping" SCSI connector pins when the cables are disconnected. The silver colored shell of the SCSI connector on the end of the cable is connected to ground and is safe to touch, but the brass colored pins inside eventually lead to the SCSI interface chip and are vulnerable. You should discharge static from your body before touching SCSI connectors by touching the 1/4" jacks on the rear of the K2500 or another grounded metal object. Any devices connected to the SCSI bus should be turned off when plugging or unplugging SCSI cables.

If the K2500 is connected to a Macintosh or PC you should make sure that the computer cannot access a SCSI disk at the same time the K2500 does (see below for more information on this). Those who occasionally want to share a drive, but don't want to take any risks would be best served by disconnecting and connecting devices as needed. If you want to share drive(s) often and cannot constantly disconnect and reconnect devices, make sure the Mac or PC is really done with the disk before using the K2500. Furthermore, you should quit or exit from all running programs and disable screen savers, email, network file sharing, and any INITs or TSR's that run in the background. If the computer and K2500 access the disk at the same time there will be no damage to the hardware, but the bits on the disk, K2500, and computer memory can easily be corrupted. You may not know that damage has been done to these bits until weird things start to happen for no apparent reason.

## K2500 and Macintosh Computers

1. The Mac really does not like having another SCSI master on the bus (i.e., the K2500). It assumes that it owns the bus and its drives, therefore it will not tolerate the situation where the K2500 is trying to talk to its (the Mac's) disk. This suggests that you never want to select the ID of any drive mounted on the Mac's desktop. Even more fundamental is the problem that the Mac assumes that the bus is always free, so if it tries to do anything via SCSI when the K2500 is doing anything via SCSI, the Mac will freak. The only solution is, wait until your Mac is completely idle before accessing SCSI from the K2500.
2. The Mac and the K2500 cannot share a drive in any way, with or without partitions. If you are using a drive with removable media, you cannot easily switch back and forth between a Mac formatted volume and a K2500 formatted volume. To prevent problems, you will need to unmount the drive from the Mac desktop before switching to a K2500 format volume. The Mac will basically ignore the volume if it's not Mac format, but once you insert a Mac format volume, the Mac owns it. Don't forget about #1 above; inserting a cartridge will cause the Mac to access SCSI, so don't try to use the K2K at that moment.
3. The only good reason for connecting the Mac and the K2K on the same SCSI bus is to use Alchemy or equivalent. If you're using a patch editor or librarian, you can just hook up via MIDI. Connecting via SCSI will allow fast sample transfers through the SMDI protocol. In this type of configuration the easiest solution is to let the K2K have its own drive, and the Mac have its own drive.

However, we have discovered that when using a K2500 with a Mac and a removable media drive in the middle of the chain, the following scenario will work:

Start with a Mac formatted cartridge in the drive. When you want to use the K2500, put the drive to sleep from the K2500. You can then change to a K2500 formatted cartridge and perform whatever disk operations you need. When you want to go back to the Mac, put the drive to sleep again, switch cartridges, and then wake up the disk by pressing **Load**. Of course the K2500 will tell you it can't read the cart, but the Mac will now access it fine.

## Accessing a K2500 Internal Drive from the Mac

Access PC is one of the many programs for the Mac which allow it to format, read, and write to DOS floppy disks and removable SCSI cartridges. However, we have discovered that it is possible to format internal K2500 hard drives, even though the documentation claims to only support removable media (not a fixed drive). Because the program claims not to be able to do this, we do not necessarily recommend it.

The main thing to remember is:

Never change the disk contents (i.e., save or delete files) from the K2500 when the disk is mounted by the Macintosh. If you do, this could easily lead to trashed files, directories, or even the entire disk. Access PC has no way of knowing when the K2500 has modified the disk structure, and it can just overwrite any state of the disk it thinks should be there. The safest thing is to connect a drive to either the K2500 or the Mac, but not both at the same time. Of course, you can't always predict when a Mac will access its drive, and it doesn't do SCSI bus arbitration, so using the Mac while using the SCSI bus from the K2500 (e.g., doing a disk mode operation) is also a bad idea, and can cause the Mac to hang.

## The MIDI Sample Dump Standard

Samples can be transferred between the K2500 and most other samplers and computer sampling programs using the MIDI Sample Dump Standard.

Due to the relatively slow transfer rate of MIDI data, transferring samples into the K2500 via the MIDI Sample Dump Standard can take a long time, on the order of a coffee break for a long sample. Most samplers, synthesizers, and computer software will “freeze up” during this process, preventing other features of the machine or program from being used. Your K2500, however, will allow you to continue playing the instrument or using any of its sound editing features during a MIDI Sample Dump! The transfer takes place in the background; the MIDI mode LED on the K2500’s front-panel will flash repeatedly during the transfer, so you will always know if the MIDI Sample Dump is still proceeding. The MIDI mode LED will flash only when the K2500 is transmitting or receiving a MIDI Sample Dump, or when it receives a MIDI System Exclusive message.

Note: if you’re using Sound Designer® to transfer samples, you’ll have to offset the sample number by 2 to transfer the right sample. For example, if you want to dump sample ID 208 from the K2500, then when you begin the sample fetching command from Sound Designer, instruct it to get sample 210.

### Loading Samples with the MIDI Standard Sample Dump

To load a sample into the K2500 from an external source such as a computer or sampler, first connect the MIDI Out port of the sampler (or computer) to the K2500’s MIDI In port, and connect the K2500’s MIDI Out to the MIDI In of the sampler. This is known as a closed-loop configuration.

Next, access the Sample Dump facility on the sampler. In addition to selecting which sample you wish to transfer over MIDI, you will need to set the correct sample dump channel number and destination sample number. The channel number should match the K2500’s SysX ID parameter (on the RECV page in MIDI mode). If the sampler has no facility for setting the Sample Dump channel number, try setting the K2500’s SysX ID parameter to 0 or 1. Alternatively, if you set the SysX ID to 127, the K2500 will accept a MIDI Sample Dump no matter what Sample Dump channel is used to send the sample dump.

If the sampler has a provision for setting the destination sample number, you can use it to specify the ID the K2500 will use for storing the sample. The K2500 sample number is mapped from the destination sample number as follows:

Sample Number	K2500 ID
0	uses lowest unassigned ID between 200 and 999.
1-199	adds 200 to the ID (i.e. 5 becomes 205 in the K2500.)
200-999	ID is the same number.

If the sample number maps to a number already assigned to a RAM sample in the K2500, the RAM sample will be deleted prior to the K2500’s accepting of the new sample load. The K2500 will always map sample number zero to an unassigned ID, and therefore no samples will be overwritten when zero is specified.

Some computer-based sample editing software limits the sample numbers to a low range such as 1-128. This conflicts with the K2500, which reserves IDs 1-199 for ROM samples, which cannot be loaded or dumped. To get around this, the K2500 adds 200 to any numbers between 1 and 199. Therefore, if you want to load a sample into the K2500 at number 219, but your program can’t transfer samples at numbers greater than 128, specify number 19 (There’s an exception to this; please see “Troubleshooting a MIDI Sample Dump” later in this section).

At this point, you're ready to try loading a sample. See "Accessing a New K2500 Sample" later in this section to learn how to use samples once they've been dumped to the K2500.

### Getting a Sample into a Sample Editor from the K2500

Connect the MIDI ports of the K2500 and the computer/sampler in a closed-loop configuration as described for the Sampler/Computer to K2500 procedure above.

Access the computer software's "Get Sample" page (it might be called something different). As with loading a sample into the K2500, the K2500 adds 200 to dump request sample numbers between 1 and 199. K2500 samples with IDs from 1 to 199 are ROM samples, and cannot be dumped. Therefore, if you want to get sample number 219 from the K2500 but your program can't transfer samples at numbers greater than 128, specify number 19 (There's an exception to this; please see "Troubleshooting a MIDI Sample Dump" later in this section).

### Loading a Sample into the K2500 from another K2500

Connect the MIDI ports of the two K2500s in a closed-loop configuration as described for the Sampler/Computer to K2500 procedure above.

On the source K2500, go to the Sample Editor and select the sample you wish to transfer. To do this, start in Program mode and press EDIT, followed by the KEYMAP soft button. Now you should be on the KEYMAP page. Now move the cursor to the Sample parameter, use any data entry method to select the desired sample, then press EDIT.

To start the sample transfer, press the Dump soft button. A dialog will appear, suggesting the ID for the sample to be dumped to the destination K2500. The source K2500 will suggest the same ID as it uses for the sample, but you can change the destination ID with any data entry method. If you choose the default by pressing Yes, the sample will transfer to the same ID on the destination K2500 as it is on the source K2500.

### Dumping from the K2500 to a Sampler

This procedure is the same as dumping a sample from one K2500 to another. This will work only if the sampler supports the MIDI Sample Dump Standard.

### Dumping a Sample from the K2500 to a MIDI Data Recorder

This can be accomplished in an open-loop configuration, by connecting the MIDI Out port of the K2500 to the MIDI In port of the MIDI Data Recorder. Go to the Sample Editor and select the K2500 sample you wish to transfer. Set up the MIDI Data Recorder to begin recording, and press the Dump soft button on the Sample Editor page. This will bring up a dialog allowing you to change the sample number in the dump if you wish. In most cases, you will just use the default value. The K2500's MIDI mode LED will flash while the data transfer is in progress.

### Loading a Sample into the K2500 from a MIDI Data Recorder

Connect the MIDI Out port of the Data Recorder to the MIDI In port of the K2500. Load the appropriate file containing the MIDI Sample Dump data into the Data Recorder, and send the file. The K2500's MIDI mode LED will flash during this procedure.

### Accessing a New K2500 Sample

First, select the K2500 program you wish to play the new sample from, and press the EDIT button. Then select the layer you wish (using the CHAN/BANK buttons if necessary), press the

KEYMAP soft button, and select a keymap. Use the default keymap called “168 Silence” if you don’t want to alter any existing keymaps.

Now, enter the Keymap Editor by pressing EDIT once again. Use the Sample parameter to select the new sample. If the new sample was loaded from another K2500, it will have the same ID as it did on the other K2500. If the sample was loaded from any other source, its ID will be defined as described above (in the section called “Loading Samples with the MIDI Standard Sample Dump”).

The name of the sample will be assigned by the K2500 if the sample has been assigned to a previously unused ID. In most cases, the sample will have a name of “New Sample - C 4”.

The name will be “New Sample! - C 4” (note the exclamation point) if checksum errors were detected by the K2500. Checksum errors are usually not serious, since they may just mean the source sampler doesn’t adhere to the MIDI Sample Dump Standard checksum calculation. In other cases, a checksum error could indicate that the MIDI data flow was interrupted during the sample transfer.

You can now press EDIT to edit the parameters of the new sample such as Root Key, Volume Adjust, Pitch Adjust, and Loop Start point. You can also rename the sample. Be sure to save the parameters you change when you press EXIT. Once the sample is adjusted to your liking, you can assign it to any Keymap.

## Troubleshooting a MIDI Sample Dump

This section will help you identify what has gone wrong if your MIDI sample dumps fail to work.

### WHEN LOADING SAMPLES TO THE K2500

There are two reasons a K2500 will not accept a MIDI Sample Dump. First, a dump will not be accepted if the destination sample number maps to a K2500 sample that is currently being edited—that is, if you’re in the Sample Editor, and the currently selected sample has the same ID as the sample you’re trying to dump. Second, a dump will not be accepted if the length of the sample to be dumped exceeds the available sample RAM in the K2500. There may be samples in the K2500 RAM that you can save to disk (if not already saved) and then delete from RAM to free up sample RAM space. You can delete the current sample by pressing the Delete soft button while in the Sample Editor.

Note that when you’re loading a sample to an ID that’s already in use, the K2500 will not accept a MIDI Sample Dump if the length of the sample to be loaded exceeds the amount of available sample RAM *plus* the length of the existing sample. If the K2500 accepts the sample load, the previously existing sample will be deleted.

Also note that certain computer-based editing programs will subtract one from the sample number when performing MIDI sample transfers to remote devices. So if you instruct these programs to send a sample to the K2500 as sample ID 204, the program will send the sample as 203. The only way to know if your program behaves in this manner is to try a MIDI Sample Dump and see what happens.

### WHEN DUMPING SAMPLES FROM THE K2500

Certain computer-based sample editing programs subtract one from the sample number when performing MIDI Sample transfers to remote devices. For instance, if you tell these programs to get sample number 204, the programs will request that the K2500 dump sample ID 203, which would ordinarily dump a different sample from the one you intended, possibly causing the dump to fail. The K2500 automatically counteracts this offset by adding a number to sample requests. This was done because more sample editing programs create this offset than do not. If

you find that the K2500 is sending samples with higher IDs than the ones you requested, you can compensate by requesting the sample ID one lower than the one you want. For example, if you want the K2500 to dump sample 205, ask for sample 204.

Some samples in the K2500 are copy-protected. These include all ROM samples and possibly some third-party samples. The K2500 will not dump these samples.

#### **Aborting a MIDI Sample Dump**

The Abort soft button in the Sample Editor can be used to cancel any sample load into the K2500 from an external source (e.g. a computer or a sampler). This button will also halt a sample dump from the K2500. The K2500 will ask for confirmation before it aborts the sample dump.

## **SMDI Sample Transfers**

You can use Passport's Alchemy® and Opcode's Max® SMDI-capable Macintosh® software packages to transfer mono and stereo samples to and from the K2500. These applications use the SMDI data transfer format (SMDI stands for SCSI Musical Data Interchange—pronounced *smiddy*. SMDI is parallel, not serial, so sample transfers can be made much faster than with the MIDI sample dump standard.

Each of these applications has commands for getting and sending samples, which is how you'll make the transfer from your offline storage to the K2500. Once the samples have been loaded to the K2500, you can use the Keymap and Sample Editors as you would with any other sample. Check your manuals for Alchemy or Max for the specifics.

Keep in mind that when transferring samples via SMDI, the K2500's sound engine is disabled, so you can't play it during a SMDI transfer as you can during a MIDI sample transfer. The average SMDI sample transfer time is about 20K per second.

As of this writing, the latest versions of Alchemy and Max are the only software packages supporting SMDI sample transfers to and from the K2500. SMDI is a new technology, however, and many software developers are working on packages that will support K2500 SMDI sample transfers. Your Kurzweil/Young Chang dealer can let you know about new developments.

# Chapter 11

## System Exclusive Protocol

### K2500 System Exclusive Implementation

The MIDI System Exclusive capabilities of the K2500 allow you to manipulate objects in the K2500's memory from a computer system, another K2500, or a MIDI data recorder. The following is a reference to the SysEx protocol used by the K2500. This information can be used to build a simple object librarian software program. A word of advice—before you begin experimenting with SysEx, make sure you have saved anything of value in RAM to disk.

**NOTE:** To support new features and changes in the K2500 line of products, the internal program structure has been changed from that of the K2000. Due to these changes, you cannot transfer a K2000 program to a K2500, or a K2500 program to a K2000 via MIDI system exclusive. The K2500 software will continue to be enhanced, and in the future the K2500 will be capable of accepting K2000 programs over MIDI. As a result of this, computer based K2000 editor/librarians will not currently work with the K2500, unless they have been revised to accommodate the changes.

#### Common Format

In the following discussion, the fields of the K2500 System Exclusive Protocol messages are notated as...

##### field(length)

...where 'field' is the name of the particular information field in the message, and 'length' is either 1, 2, 3, or n, representing the number of sequential MIDI bytes that make up the field. A length of 'n' means that the field is of a variable length that is determined by its contents or sub-fields.

All K2500 SysEx messages have the common format:

**sox(1) kid(1) dev-id(1) pid(1) msg-type(1) message(n) eox(1)**

'sox' is always F0h, and represents start of System Exclusive.

'kid' must be 07h, and is the Kurzweil Manufacturer ID.

'dev-id' is Device ID. The K2500 will recognize a SysEx message if the 'dev-id' is the same as the SysX ID parameter from the MIDI Receive page (from the top level, press the MIDI mode button and the RECV soft button.) If the K2500's SysX ID parameter is set to 127, it will recognize SysEx messages no matter what the 'dev-id' is.

'pid' is the Product Identifier, and must be 78h (120 decimal), indicating the SysEx message is for the K2500.

'msg-type' is the identifier of one of the K2500 SysEx messages defined below, and 'message' is the variable-length message contents.

'eox' is always F7h, for end of System Exclusive.

#### Data Formats

K2500 SysEx messages are subdivided into fields that contain data in different formats. The various fields are shown in the Messages section below. Within a message, any fields for values that can be bigger than 7 bits are broken into 7 bit chunks. Thus two MIDI bytes gives 14 bits, three bytes gives 21 bits. The significant bits are right justified in the field. All bytes in a field must be present no matter what the value is. For example, an object type of 132 would be split into two MIDI bytes in a 'type' field as 01 04:

decimal: 132

binary: 10000100

binary encoding for type(2) field: 0000001 0000100

decimal encoding for type(2) field: 1 4

Object name fields are sent as a string of ASCII values in a 'name' field, with one MIDI byte of zero as a string terminator. For example, the name "Glass Kazoo" would be sent as letters:

G l a s s \_ K a z o o <null>

hex encoding for 'name' field: 47 6C 61 73 73 20 4B 61 7A 6F 6F 00

Data sizes and offsets are sent in the 'size' and 'offs' fields. These values refer to quantities of 8-bit bytes in the K2500's memory, which is packed in the 'data' field.

Binary data in the 'data' field is sent by in one of two formats, according to the value of the 'form' field. If the 'form' field equals zero, the data is transmitted as 4 bits or one "nibble" in every MIDI byte. If the 'form' field equals one, then the data is sent as a compressed bit-stream, with 7 bits per midi byte. The bit-stream format is more efficient for data-transmission, while the nibble format is easier to read (and write software for).

For example, to send the following four K2500 data bytes,

hex:	4F	D8	01	29
decimal:	79	216	1	41
binary:	01001111	11011000	00000001	00101001

eight MIDI bytes are sent in "nibble" format:

hex:	04	0F	0D	08	00	01	02	09
decimal:	4	15	13	8	0	1	2	9
binary:	0000100	0001111	0001101	0001000	0000000	0000001	0000010	0001001

five MIDI bytes are sent in bit-stream format:

hex:	27	76	0	12	48
decimal:	39	118	0	18	72
binary:	0100111	1110110	0000000	0010010	1001000

The bit-stream format can be thought of as taking the binary bits of the K2500 data and, starting from the left, slicing off groups of 7 bits. Note that the trailing bits are set to zero.

After the 'data' field, there is another field, 'xsum'. This is a checksum field which is calculated as the least significant 7-bits of the sum of all of the MIDI bytes that make up the 'data' field.

## Messages

This section defines the K2500 System Exclusive message formats. Each message has a message type (that goes in the 'msg-type' field; see Common Format, above), followed by the field definitions of the message.

**DUMP = 00h**      **type(2) idno(2) offs(3) size(3) form(1)**

...requests the K2500 to send a data dump of an object or portion thereof. 'type' and 'idno' identify the object. 'offs' is the offset from the beginning of the object's data and 'size' describes how many bytes should be dumped starting from the offset. 'form' indicates how the binary data is to be transmitted (0=nibbled, 1=bit stream). The response is a LOAD message:

**LOAD = 01h**      **type(2) idno(2) offs(3) size(3) form(1) data(n) xsum(1)**

...which writes data into the specified object, which must exist. Both load and dump operate on the object data only. The response to a load message will be

**DACK = 02h**      **type(2) idno(2) offs(3) size(3)**

...meaning "load accepted", or

**DNAK = 03h**      **type(2) idno(2) offs(3) size(3) code(1)**

...meaning "load not accepted." The 'code' field indicates the cause of the failure, as follows::

code	meaning
1	Object is currently being edited
2	Incorrect checksum
3	ID out of range (invalid)
4	Object not found (no object with that ID exists)
5	RAM is full

To request information about an object, use:

**DIR = 04h**      **type(2) idno(2)**

The 'type' and 'idno' identify the object. The response is an INFO message:

**INFO = 05h**      **type(2) idno(2) size(3) ramf(1) name(n)**

This is the response to DIR, NEW, or DEL. If object is not found, 'size' will be zero and 'name' will be null. 'ramf' is 1 if the object is in RAM.

**NEW = 06h**      **type(2) idno(2) size(3) mode(1) name(n)**

...creates a new object and responds with an INFO message of the created object. The object's data will not be initialized to any default values. If 'idno' is zero, the first available object ID number will be assigned. If 'mode' is 0, the request will fail if the object exists. If 'mode' is 1, and the object exists in ROM, a RAM copy will be made. If 'mode' is 1, and the object exists in RAM, no action is taken.

**DEL = 07h**      **type(2) idno(2)**

...deletes an existing object and responds with an INFO message for the deleted object. If there is only a RAM copy of the object, the response will indicate that the object doesn't exist anymore. However, if the deletion of a RAM object uncovers a ROM object, the INFO response will refer to the ROM object. A ROM object cannot be deleted.

**CHANGE = 08h      type(2) idno(2) newid(2) name(n)**

...changes the name and/or ID number of an existing object. If 'newid' is zero or 'newid' equals 'idno', the ID number is not changed. If 'newid' is a legal object id number for the object's type, then the existing object will be relocated in the database at the new ID number. This will cause the deletion of any object which was previously assigned to the 'newid'. If the 'name' field is null, the name will not change. Otherwise, the name is changed to the (null-terminated) string in the 'name' field.

**WRITE = 09h      type(2) idno(2) size(3) mode(1) name(n) form(1) data(n) xsum(1)**

...writes an entire object's data directly into the database. It functions like the message sequence DEL followed by NEW followed by a LOAD of one complete object data structure. It first deletes any object already existing at the same type/ID. If no RAM object currently exists there, a new one will be allocated and the data will be written into it. The object name will be set if the 'name' string is non-null. The response to this message will either be a DACK or a DNAK, as with the load message. The 'offs' field of the response will be zero. The K2500 will send a WRITE message whenever an object is dumped from the front-panel (using a "Dump" soft-button), or in response to a READ message.

The 'mode' field is used to determine how the 'idno' field is interpreted.

If 'mode' = 0:

The 'idno' specifies the absolute ID number to write to, which must exist.(must be valid)

If 'idno' equals zero, write to the first available ID number.

If 'mode' = 1

The object is written at the first available ID number after what is specified by 'idno'.

It doesn't matter if 'idno' is a legal ID number. Remember that for certain object types, the 100s through 900s banks allow fewer than 100 objects to be stored (for example, the 100s bank will store preset effects at IDs 100—109 only). In this mode, if 'idno' was 313, the object would be written to ID 400 if available.

**READ = 0Ah      type(2) idno(2) form(1)**

...requests the K2500 to send a WRITE message for the given object. No response will be sent if the object does not exist.

**READBANK = 0Bh type(2) bank(1) form(1) ramonly(1)**

...requests the K2500 to send a WRITE message for multiple objects within one or all banks.

'type' and 'bank' specify the group of objects to be returned in WRITE messages. The 'type' field specifies a single object type, unless it is zero, in which case objects of all user types will be returned (see object type table below). The 'bank' field specifies a single bank, 0-9, unless it is set to 127, in which case objects from all banks will be returned.

'form' requests the format of the binary data in the WRITE messages. If 'ramonly' is one, only objects in RAM will be returned. If 'ramonly' is zero, both RAM and ROM objects are returned.

The responses, a stream of complete WRITE messages, will come out in order of object type, while objects of a given type are in order by ID number, from lowest to highest. If no objects are found that match the specifications, no WRITE messages will be returned. After the last WRITE message, an ENDOFBANK message (defined below) is sent to indicate the completion of the bank dump.

The K2500 will insert a small delay (50ms) between WRITE messages that it issues in response to a READBANK message.

A bank dump can be sent in its entirety to another K2500, which will add all of the objects contained in the dump to its own object database. IMPORTANT: If the K2500 receives a large bank dump for a bank or banks that already contain objects, errors may result unless the sender waits for the DACK message before sending the next object's WRITE message. One way to avoid transmission errors such as this is to make sure that the bank being dumped is clear in the K2500 before sending the dump, so that the K2500 will not miss parts of the dump while its CPU is busy deleting already existing objects. This can be done using the DELBANK message (defined below). If the destination bank in the K2500 is pre-cleared, it is not necessary to wait for the DACK before sending. Even if the sender chooses not to wait for the DACK before sending the next message, it may be necessary to preserve the 50ms delay between the WRITE messages.

Due to the large amount of incoming data during a bank dump containing many objects, the receiving K2500 may have a more sluggish response to front-panel use and keyboard playing during the data transfer. This is normal behavior and the machine will become fully responsive as soon as the dump is finished.

**DIRBANK = 0Ch   type(2)   bank(1)   ramonly(1)**

This is similar to the READBANK message. The DIRBANK message requests an INFO message (containing object size, name, and memory information) be returned for each object meeting the specifications in the 'type' and 'bank' fields. Following the last INFO response will be an ENDOFBANK message.

**ENDOFBANK = 0Dh type(2)   bank(1)**

This message is returned after the last WRITE or INFO response to a READBANK or DIRBANK message. If no objects matched the specifications in one of these messages, ENDOFBANK will be the only response.

**DELBANK = 0Eh   type(2)   bank(1)**

This message will cause banks of objects (of one or all types) to be deleted from RAM. The 'type' and 'bank' specifications are the same as for the READBANK message. The deletion will take place with no confirmation. Specifically, the sender of this message could just as easily delete every RAM object from the K2500 (e.g. 'type' = 0 and 'bank' = 127) as it could delete all effects from bank 7 (e.g. 'type' = 113, 'bank' = 7.)

**MOVEBANK = 0Fh type(2)   bank(1)   newbank(1)**

This message is used to move entire banks of RAM objects from one bank to another. A specific object type may be selected with the "type" field. Otherwise, if the "type" field is unspecified (0), all object types in the bank will be moved. The "bank" and "newbank" fields must be between 0 and 9. The acknowledgement is an ENDOFBANK message, with the "bank" field

equal to the new bank number. If the operation can't be completed because of a bad type or bank number, the ENDOFBANK message will specify the old bank number.

**LOADMACRO = 10h**

...tells K2500 to load in the macro currently in memory.

**MACRODONE = 11h    code(1)**

...acknowledges loading of macro. Code 0 indicates success; code 1 means failure.

**PANEL = 14h        buttons(3n)**

...sends a sequence of front-panel button presses that are interpreted by the K2500 as if the buttons were pressed at its front-panel. The button codes are listed in a table at the end of this chapter. The K2500 will send these messages if the Buttons parameter on the XMIT page in MIDI mode is set to On. Each button press is 3 bytes in the message. The PANEL message can include as many 3-byte segments as necessary.

Byte 1      Button event type:

08h          Button up

09h          Button down

0Ah          Button repeat

0Dh          Alpha Wheel

Byte 2      Button number (see table)

Byte 3      Repeat count (number of clicks) for Alpha Wheel; the count is the delta (difference) from 64—that is, the value of the byte minus 64 equals the number of clicks. A Byte 3 value of 46h (70 dec) equates to 6 clicks to the right. A Byte 3 value of 3Ah (58 dec) equates to six clicks to the left. For example, the equivalent of 6 clicks to the right would be the following message:

(header) 14h 0Dh 40h 46 (eox)

For efficiency, multiple button presses should be handled by sending multiple Button down bytes followed by a single Button up byte (for incrementing with the '+' button, for instance. )

## Object Types

These are the object types and the values that represent them in 'type' fields:

Type	ID (decimal)	ID (hex)	ID(hex, 'type' field)
Program	132	84h	01h 04h
Keymap	133	85h	01h 05h
Effect	113	71h	00h 71h
Song	112	70h	00h 70h
Setup	135	87h	01h 07h
Soundblock	134	86h	01h 06h
Velocity Map	104	68h	00h 68h
Pressure Map	105	69h	00h 69h

---

Quick Access Bank	111	6Fh	00h 6Fh
Intonation Table	103	67h	00h 67h

### Master Parameters

The Master parameters can be accessed as type 100 (00h 64h), ID number 16. Master parameters cannot be accessed with any of the Bank messages.

### Button Press Equivalence Table

<u>Button</u>	<u>Code (hex)</u>	<u>Button</u>	<u>Code(hex)</u>
<b><i>Alphanumeric pad</i></b>		<b><i>Soft-Buttons 'A-F'</i></b>	
zero	00	A '(leftmost)	22
one	01	B	23
two	02	C	24
three	03	D	25
four	04	E	26
five	05	F (rightmost)	27
six	06	AB	28
seven	07	CD (two center)	29
eight	08	EF	2A
nine	09	YES	26
+/-	0A	NO	27
<b><i>Alphanumeric pad</i></b>		<b><i>Edit/Exit</i></b>	
CANCEL	0B	EDIT	20
CLEAR	0C	EXIT	21
ENTER	0D		
<b><i>Navigation</i></b>		<b><i>Mode Selection</i></b>	
Plus (+)	16	PROGRAM	40
Minus (-)	17	SETUP	41
Plus and Minus	1E	QUICK ACCESS	42
CHAN/BANK Inc	14	EFFECTS	47
CHAN/BANK Dec	15	MIDI	44
CHAN/BANK Inc/Dec	1C	MASTER	43
Cursor Left	12	SONG	46
Cursor Right	13	DISK	45
Cursor Left/Right	1A		
Cursor Up	10		
Cursor Down	11		

Cursor Up/Down            18

The next four commands allow you to read the screen display, both text and graphics layers.

**ALLTEXT = 15h**

...requests all text in the K2500's display.

**PARAMVALUE = 16h**

...requests the current parameter value.

**PARAMNAME = 17h**

...requests the current parameter name.

**GETGRAPHICS = 18h**

...requests the current graphics layer.

**SCREENREPLY = 19h**

This is the reply to ALLTEXT, PARAMVAL, PARAMNAME, GETGRAPHICS, or SCREENREPLY.

The reply to ALLTEXT will be 320 bytes of ASCII text (the display has 8 rows of 40 characters each). If you receive less than that, then the screen was in the middle of redrawing and you should request the display again.

The reply to PARAMVALUE will be a variable length ASCII text string. Some values (like keymaps, programs, samples, etc.) include their ID number in the text string (e.g., "983 OB Wave 1"). Some messages are also padded with extra spaces.

The reply to PARAMNAME will be a variable length ASCII text string. In cases where there is no parameter name (like on the program page) there will just be the single 00 null terminator.

The reply to GETGRAPHICS will be 2560 bytes of information. The 6 least significant bits of each byte indicate whether a pixel is on or off. If pixels are on over characters, the text becomes inverted. Characters on the K2500 display are a monospaced font with a height of 8 pixels and a width of 6 pixels.

## Chapter 12

### Glossary

<b>Algorithm</b>	In the K2500, a preset configuration of programmable digital signal processing functions. Each of a program's layers uses its own algorithm, which determines the type of synthesis each layer uses to generate its sound.
<b>Aliasing</b>	A type of distortion that occurs in digitally sampled sounds when higher pitches (increased sample playback rates) introduce partials that were not present in the original sound. These partials may or may not be musically useful.
<b>Amplitude</b>	The intensity of a signal, perceived as loudness in the case of audio signals.
<b>Analog</b>	A term used widely in electronics-related fields to describe a method of representing information, in which the method of representation resembles the information itself. Analog synthesizers, for example, use gradual variations in electrical voltage to create and modify sounds. The oscillations in voltage are analogous to the waveforms of the sounds they generate. Compare Digital.
<b>Bandwidth</b>	In terms of sound generation, the range of frequencies within which a device functions. The human ear has a "bandwidth" of almost 20 KHz (it can distinguish sound at frequencies from 20 Hz to 20KHz). The K2500's 20KHz bandwidth enables it to produce sounds that span the entire range of humanly audible sound.
<b>Bank</b>	There are two types of banks in the K2500's memory: memory banks, which store and organize the programs and other objects you create, and Quick Access banks, where you can store programs and setups for one-button access while in Quick Access mode.
<b>Cent</b>	1/100th of a semitone. The standard increment for fine adjustment of pitch.
<b>Continuous control</b>	A device that converts motion into a range of 128 possible values that can modulate a sound source. The Mod Wheel, a standard volume pedal, and controllers like Breath and Aftertouch are continuous controls. Compare switch controls.
<b>Control Source</b>	Anything that can be used to modify some aspect of a program's sound. LFOs, envelopes, Mod Wheel messages (MIDI 01), and FUNs are just a few examples of the K2500's control sources.
<b>DSP</b>	Digital signal processing (see)
<b>DSP Functions</b>	The K2500's collection of digital signal processing functions are what give the Variable Architecture Synthesis system its flexibility. Within each layer's algorithm, you can select from a long list of DSP functions like filters, EQ, oscillators, and a few that are unique to the K2500. Each DSP function has a corresponding page that enables you to assign numerous control sources to define how the DSP functions affect the sound of the program you're editing.
<b>Default</b>	The starting condition of a system. The settings for the K2500's parameters are at their defaults when you unpack it, and they stay there until you change them. A hard reset will erase RAM and restore all parameters to their defaults.

<b>Dialog</b>	A page that prompts you to enter information that the K2500 needs in order to execute an operation. Dialogs appear, for example, when you initiate a Save or Delete operation.
<b>Digital</b>	A term used widely in electronics-related fields to describe a method of representing information as a series of binary digits (bits)—1s and 0s. Digital computers process these strings of 1s and 0s by converting them into an electrical signal that is always in one of two very definite states: “on” or “off.” This is much more precise than the analog method, therefore digital computers can operate at speeds unattainable by analog devices. Digital synthesizers like the K2500 are actually computers that process vast strings of digital information signals, eventually converting them (at the audio output) into the analog signals that flow into PAs and other audio systems. See also Analog.
<b>Digital Signal Processing</b>	The term “Signal processing” refers to a vast range of functions, all of which have in common the fact that they act upon an electric current as it flows through a circuit or group of circuits. A simple form of signal processing is the distortion box used by many guitarists. <i>Digital</i> signal processing refers to similar processes that are performed by digital (see) circuitry as opposed to analog (see) circuitry. Many of the effects devices available today use digital signal processing techniques.
<b>Drum Program</b>	The only difference between a drum program and an ordinary program is that a drum program can contain up to 32 layers instead of the usual maximum of three. Since each layer has its own keymap and algorithm (not to mention all the other control sources), this gives you enormous control over whatever sounds you assign to the layers in a drum program.
<b>Editor</b>	The complete set of parameters used to modify a particular aspect of the K2500, for example, the currently selected Program, which is modified with the Program Editor. The Program Editor spans several display pages, which can be viewed by using the soft buttons (the ones labeled “<more>.”
<b>Envelope</b>	An aperiodic modifier. In other words, a way to cause a sound to change over time without repeating the change (unlike periodic modifiers like LFOs, which repeat at regular intervals).
<b>File</b>	A group of objects stored to a floppy or hard disk, or loaded into the K2500’s RAM from disk.
<b>Global</b>	In this manual, used primarily in reference to control sources. A global control source affects all notes in a layer uniformly. If a layer uses a global control source, that control source begins to run as soon as the program containing it is selected. Its effect on each note will be completely in phase, regardless how many notes are being played. Compare Local.
<b>Hard Reset</b>	Resets all parameter values to their defaults, and completely erases the contents of RAM. Press the Reset button in Master mode to do a hard reset. This is a quick way to restore the factory defaults to your K2500, but EVERYTHING in RAM (all the objects you’ve created) will be erased, so objects you wish to keep should be saved to disk or SyxEx dump. A hard reset should not be used to recover if your K2500 is hung up, except as a last resort. See Soft Reset.
<b>Keymap</b>	A keymap is a collection of samples assigned to specific notes and attack velocities. Keymaps usually contain numerous sample roots pitch-shifted across a range of several notes. When you trigger a note, the keymap tells the K2500 what sound to play, at what pitch, and at what loudness.

<b>LFO</b>	Low frequency oscillator. An oscillator is an electrical signal that cycles regularly between a minimum and maximum amplitude. The simplest oscillating waveform is the sine wave, but an LFO waveform can have almost any shape. The number of times each second that an oscillator repeats itself is called its frequency, which is measured in Hertz (Hz). Anything up to 50 Hz is considered low-frequency in musical applications. Use an LFO whenever you want to generate a <i>periodic</i> (repeating) effect. Adjusting the rate of the LFO will change the repetition rate of the effect.
<b>Layer</b>	A layer consists of a keymap processed through an algorithm. Layers can be stacked together within a program. Each layer uses one of the K2500's 48 available voices. Each K2500 program can contain up to three layers—except drum channel programs, which can contain up to 32 layers.
<b>Leslie effect</b>	This classic vibrato effect was originally created by mounting a speaker in its cabinet so the speaker could be rotated at varying speeds. This applied a vibrato of varying rate to all sounds played through the rotating speaker.
<b>Local</b>	In this manual, used primarily in reference to control sources. A local control source affects each note in a layer independently. For example, if a local LFO is used as a control source, a separate LFO cycle will begin with each note start. The LFOs don't run in phase unless notes are started simultaneously. Compare Global.
<b>Memory banks</b>	The K2500's memory is divided into ten spaces where you can store any object you edit. These spaces are called banks. Each bank can hold up to 100 objects of each type, so we refer to them as the 100s bank, the 200s bank, and so on. The ID of an object determines which bank it's stored in. An object with an ID of 399, for example, would be stored in the 300s bank. ROM objects are stored in the Zeros and 100s banks. RAM objects can be stored in any bank.
<b>MIDI</b>	Musical Instrument Digital Interface. A specialized format for representing musical information in terms of standardized computer data, which enables electronic musical instruments to communicate with computers
<b>MIDI device</b>	Any device—keyboard, computer, wind instrument, etc.—which is capable of transmitting and receiving MIDI messages.
<b>MIDI Master</b>	A MIDI device that is configured to control one or more other MIDI devices. The MIDI Out port of the master is connected by cable to the MIDI In port(s) of the slave device(s).
<b>MIDI Slave</b>	A MIDI device that is configured to receive MIDI messages from a master device. The MIDI In port of the slave is connected by cable to the MIDI Out port of the master.
<b>Non-linear DSP Function</b>	Without getting technical, non-linear DSP functions like SHAPER and WRAP add waveforms to those already present in a sound, while linear DSP functions act upon the existing waveforms without adding new ones.
<b>Note State</b>	Any K2500 note is either on or off; this is its note state. Normally, any given note's Note State switches on when you strike the key for that note. It switches off when you release the key, and any sustain controls you may have applied to the note (Sustain or Sostenuto pedal, etc.). Also see the index entry for Note State.
<b>Object</b>	A chunk of information stored in the K2500's memory. Programs, setups, keymaps, and samples are all objects. There are several others as well. Also see the index entry for "Objects."

<b>Page</b>	A set of performance or programming parameters that appear as a group in the display. The entry level page for each mode appears when you select the mode. Most other pages are selected with the soft buttons, from within an editor.
<b>Parameter</b>	A programming feature. The name of the parameter describes the function it controls—transposition, for example. Each parameter has a value associated with it, which indicates the status of the parameter.
<b>Pixel</b>	A contraction of “picture element.” The K2500’s display consists of a screen with small square dots (the pixels). Each pixel lets light through or blocks it depending on whether it is receiving an electrical charge. The combination of light and dark dots creates a pattern that you recognize as text or graphics. The K2500’s display is 240-by-64 pixels, in other words, 64 horizontal rows, each containing 240 pixels, for a total of 15360 pixels.
<b>Program</b>	The K2500’s basic performance-level sound object. Programs can consist of up to 3 layers (32 layers for programs on the drum channel); each layer has its own keymap (set of samples) and sound-processing algorithm.
<b>Program Editor</b>	The set of parameters that lets you modify the sound of ROM or RAM programs. Enter the Program Editor by pressing the EDIT button while in Program mode, or any time the currently selected parameter has a program as its value.
<b>RAM</b>	Random Access Memory, one of the two basic types of computer memory. RAM can be both read from and written to. When you load samples into the K2500, or save a program you’ve created, you’re writing to RAM. Compare ROM.
<b>ROM</b>	Read Only Memory, one of the two basic types of computer memory. You can retrieve the information stored in ROM, but you can’t write (save) new information to it. The onboard sounds of your K2500 are stored in ROM.
<b>Sample</b>	A digital recording of a sound that can be assigned to a keymap as part of the process of building a program. Samples are stored in ROM (factory-installed) or in RAM (loaded from disk).
<b>SCSI</b>	Pronounced “scuzzy,” this acronym stands for Small Computer Systems Interface. It’s simply a standardized form of information exchange that allows any SCSI equipped device to communicate with any other SCSI device. Two or more SCSI devices—they can be computers, hard disks, printers, just about anything that sends or receives information in standardized form—are connected via special cables to their SCSI ports. This configuration is much faster than serial information exchange, the precursor to SCSI.
<b>SMDI</b>	Pronounced “smiddy,” this acronym stands for SCSI Musical Data Interchange. It’s a new format for data transfer, based on the SCSI format, which uses parallel input/output rather than serial, as used by MIDI and standard SCSI operations. This enables data to flow much faster. You can use SMDI to transfer samples to and from the K2500 using software packages from Passport and Opcode.
<b>SMF</b>	Standard MIDI File. MIDI Type 0 files are single track, while MIDI Type 1 files are multi-track. The K2500 can read and write Type 0 files and read Type 1 files.
<b>Semitone</b>	In “Western” music, the standard interval between the twelve notes in the scale. There are twelve semitones to an octave. The interval between C and C# is one semitone.

<b>Setup</b>	A multi-timbral performance object. A setup consists of three zones, each of which can be assigned its own program, MIDI channel, and control assignments. These assignments control the K2500's operation while in Setup mode, as well as determining the Program Change numbers and controller messages the K2500 sends via MIDI.
<b>Soft Reset</b>	Returns the K2500 to Program mode without affecting the contents of RAM. Press the +/-, 0, and CLEAR buttons to do a soft reset. If your K2500 is hung up for some reason, this will usually get take care of the problem. See Hard Reset.
<b>Switch control</b>	A device that converts motion into discrete on/off signals. A switch control, like the Sustain pedal, is either on or off. Compare continuous control.
<b>Toggle</b>	As a verb, to switch between (usually) two conditions using a device that makes the switch. As a noun, the device that makes the switch. For example, pressing the "View" soft button on the top level Program mode page toggles between small-type and large-type views of the current Program.
<b>Value</b>	The current setting of a parameter. Each parameter has a range of available values, one of which you select while editing. The Transposition parameter on the Program mode page, for example, has a default value of 0. Change the value to change the parameter's effect on the current program.
<b>Variable Architecture Synthesis Technology (V. A. S. T.)</b>	The term created by Kurzweil engineers to describe the multi-faceted capabilities of the K2500, combining sample playback (ROM and RAM), and waveform generation with a broad array of processing functions. This architecture provides preset algorithms created by Kurzweil sound engineers, which include filters, distortion, panning, EQ, waveform oscillators, waveform shaper, hard sync oscillators, amplitude modulation, gain, crossfade, and more. V. A. S. T. is a registered trademark of Young Chang Akki Co. Ltd.
<b>Zero Crossing</b>	Any of a number points in the digital representation of a sound's waveform where the digital signal is neither positive or negative. When looping samples, starting the loop at one of these points will reduce or eliminate the click or change in timbre that can occur in sample loops.

# Chapter 13

## Specifications

### K2500 FEATURES

- 240 x 64-pixel backlit fluorescent graphic display with adjustable contrast
- 3.5-inch floppy disk drive, for DD or HD disks, DOS compatible
- MIDI In, Thru, and Out with selectable second MIDI Out
- MIDI LED to indicate MIDI activity
- 48-note polyphony with dynamic voice allocation
- Multi-timbral, for multi-track sequencing and recording
- 199 factory preset programs, and 100 factory preset setups
- Up to 3 layers per program, up to 32 layers for programs on drum channels
- Receives mono (channel) pressure and poly (key) pressure
- 8-zone setups transmit on 8 MIDI channels with independent programmable controls
- Fully featured onboard sequencer for recording from keyboard or via MIDI; loads and plays MIDI Type 0 sequences
- Easy-to-use programming interface including soft buttons, Alpha Wheel, and alphanumeric pad
- 8 Megabytes of 16-bit sample ROM, including acoustic instrumental sounds, waveforms, and noise
- 20 KHz maximum bandwidth
- Optional stereo sampler with analog and digital inputs
- AES/EBU I/Os and optical I/O
- Sound ROM expandable to a total of 28 Megabytes
- 8 SIMM sockets for optional sample RAM—up to 128 Megabytes
- Stereo sample playback capability
- Akai® S1000 sample disk compatibility
- Two 1/4-inch mixed audio outputs (stereo pair)
- Eight 1/4-inch audio outputs programmable as four stereo pairs or as eight separate outputs, with insert capability for effects patching
- Stereo headphone jack
- Optional effects board with direct digital out and digital stereo insert
- 240K battery-backed RAM for user programs, setups and other objects, expandable to 1256K
- Two SCSI ports for connection with external SCSI disks, CD-ROM drives, or Macintosh® personal computers
- Optional internal hard disk
- Optional 8 channel interface to AES, ADAT, DA-88
- Realtime DSP for each voice: 31 programmable DSP algorithms incorporating filters, EQ, distortion, panning, pulse width modulation, and more; up to 3 programmable DSP functions per voice

## Specifications

---

### K2500 FEATURES

- Filters: Lowpass, Highpass, Allpass, Bandpass, Notch, programmable resonance
- Programmable stereo multi-effects on MIX outputs, including simultaneous reverb, chorus, delay, flanging, EQ—and more
- Realtime internal and MIDI control of effects parameters
- MIDI standard sample dump/load capability
- SMDI sample dump/load capability
- System Exclusive implementation
- MIDIScope™ for analyzing MIDI events

## Environmental Specifications

### Temperature ranges

For operation:	minimum	41° F (5° C)
	maximum	104° F (40° C)
For storage:	minimum	-13 ° F (-25° C)
	maximum	186° F (85° C)

### Relative humidity ranges (non-condensing)

Operation and storage:	5—95%
------------------------	-------

## Physical Specifications

Overall dimensions	K2500R	K2500	K2500X
Width	16.9 in.* 43 cm.	47.8 in. 121.4 cm.	54.3 in. 137.9 cm.
Depth	13.9 in. 35.4 cm.	17.8 in. 45.1 cm.	17.8 in. 45.1 cm.
Height	5.1 in. 13 cm.	4.8 in. 12.2 cm.	4.8 in. 12.2 cm.
Weight:	24.65 lb. 11.2 kg.	55.5 lb. 25.2 kg.	72 lb. 32.7 kg.

\* Excluding the rack-mount brackets

## Electrical Specifications

AC supply: selectable; 100V, 120V, 220V, or 240V. 1.0 amps at 120 volts nominal

### Safe voltage ranges

Voltage setting:	100V	120V	220V	240V
Safe voltage range:	85—107	95—125	180—232	190—250
Safe frequency range:	48—65	48—65	48—65	48—65

If the voltage drops below the minimum safe level at any voltage setting, the K2500 will reset, but no data will be lost. If the voltage exceeds the maximum safe level, the K2500 may overheat.

# MIDI Implementation Chart

**Model: K2500**

**Manufacturer:**  
Young Chang

**Date: 3/21/95**  
**Version 1.0**

## Digital Synthesizers

Function		Transmitted	Recognized	Remarks
Basic Channel	Default	1	1	Memorized
	Changed	1 - 16	1 - 16

## K2500 Program Farm

The K2500 Program Farm, included on one of the accessory disks, provides you with a large collection of additional programs. You can either use these programs as they are, or edit them further to suit your own tastes.

## Overview of Program Files

### ANACOMPS.K25

#### *Analog Comping Sounds*

- Prophets
- PWM Synth
- Saws w/ Resonance
- Sawtooth
- Synth Brass
- Vintage Synths
- Mellotrons

### ANALEADS.K25

#### *Analog Lead Sounds*

- Fusion
- Intervals
- Minimoog
- Pseudamentos
- Rock Leads
- Syncro Sounds

### ANAPADS.K25

#### *Analog Pads*

- Analog String Pads
- Classic Pads
- Philtered Pads
- Soft Sawtooth Pads

### BASS.K25

#### *Bass*

- Dual Basses
- Picked or Fingered Basses
- Slap Basses
- Stylized Basses
- Analog Synth Basses
- House Basses

### BELLS.K25

#### *Bell Sounds*

- Bell Pads
- Percussive Bell Comps

### BRASS.K25

#### *Brass & Winds*

- Solo Trumpets
- Muted Trumpet Emulations
- Solo Trombones
- Bass Horn Emulations
- Solo Flutes
- Piccolo Emulations
- Sax Emulations
- Sax Sections
- Brass Sections
- Brass and Strings

### DIGITAL.K25

#### *Digital Sounds*

- Digital Leads
- AM Sounds
- DigiBuzz
- Digital Clavs
- DigiDistort
- PPG's
- Miscellaneous Digital Sounds

### DKICKSNR.K25

#### *Individual Kicks And Snares*

- Kicks
- Snares

### DRUMS.K25

#### *Drum Kits And Percussion Sounds*

- Techno sounds
- Percussion
- Drums Kits
- Toms
- Mallet Sounds
- Multi Taps

### ENSEMBLE.K25

#### *Acoustic Ensembles*

- Orchestral Ensembles
- Layered w/ Guitar
- Jazz and Rock Combos

### ETHEREAL.K25

#### *Ethereal*

- Stepped Pads
- Vocal Pads
- Air Pads
- Glassy Pads
- Pads w/ Partial
- Hybrid Strings and/or Vocal Pads
- Generic Ethereal Sounds

### FXSOUNDS.K25

#### *Effects Sounds/Textures*

- Sawtalk
- Water Sounds
- Weather Emulations
- Weird Percussive Things
- Natural Sounds
- Strange Loops

## **GUITARS.K25**

### *Guitars*

- Steel String Guitars
- 12-String Guitars
- Stylized Steel String Guitars
- Guitars w/ Strings or Pads
- Combination Guitars
- Jazz Guitars
- Guitar Mutes
- Distorted Emulations
- Exotic Plucked Things

## **HYBPERC.K25**

### *Percussive Hybrids*

- Percussive Comps
- Percussive Pads

## **HYBRIDS.K25**

### *General Hybrid Sounds*

- Hybrid String Pads
- Hybrid String Pads w/ Resonance
- Hybrid Stacks
- Flute-Like Hybrids

## **ORGANS.K25**

### *Organs*

- Clean Rock Organs
- Clean Percussive Organs
- Pipe Organs
- Velocity Sensitive Organs
- Organ-Like Synths

## **PNOEPNO.K25**

### *Piano & E Pianos*

- Classical Pianos
- Rock Pianos
- Pianos w/ Strings or Choir
- Bright and House Pianos
- Stylized Pianos
- Electric Grands
- Rhodes Pianos
- Dyno Pianos
- FM Pianos
- Clavinet Emulations
- Harpsichord Emulations

## **STRINGS.K25**

### *Strings*

- Straight Strings
- Attack Velocity Strings
- Sfz Strings
- Ensemble Strings
- Layered Solo and Ensemble Strings
- Solo Violin and Cello
- Pizz Emulations
- String Pads

## **VOX.K25**

### *Vocal Sounds*

## **Programs Within the Files**

The complete list of programs in the K2500 Program Farm is provided on the following pages. Each program is numbered as if it were loaded into the 200's bank.

## ANACOMPS.K25

Analog Comping Sounds  
(88 Programs)

### Prophets

200-Prophet Clav  
201-Prophet Clav #3  
202-Prophet Disco  
203-Prophet Disco 2  
204-Prophet Fuzz  
205-Prophet Fuzz #2  
206-Prophet Piano 1  
207-Prophet Pulse 1  
208-Prophet Pulse 2  
209-Prophet Pulse 3  
210-Prophet Pulse 4  
211-Prophet Pulse 5  
212-Prophet PWM Clav  
213-Prophet Square 1  
214-Prophet Square 2  
215-Prophet Square 3  
216-Prophet Square 4  
217-Prophet phase  
218-Brightsaw Prophet  
219-Neo-Prophet  
220-Mellow Prophet  
221-70's Synth  
**PWM Synth**  
222-Big Mondo PWM  
223-Big PWM  
224-Big PWM #2  
225-Big PWM #5  
226-Env PWM  
227-PWM Ags  
228-Journey Synth

### Saws w/ Resonance

229-Ana's Saws  
230-OB-8 1  
231-Obyrez #1  
232-R&B Synth  
233-Clean Sweep  
234-Alaska  
235-Analog Saw Pad  
236-Poly Analog 1  
237-Poly Analog 2  
238-Poly Analog 5th  
239-Bright and Fat  
240-Saw Teeth  
241- 9 Osc Sweep  
242-Big Synth #1  
243-Saw Repeater

### Sawtooth

244-Sawz  
245-Big Jupiter  
246-Dry Pluck Pad

247-o b Waves

248-Polysynth

249-Thick Osc

250-Oh Bee !!!

### Synth Brass

251-OBX Braz #1  
252-OBX Braz #2a  
253-OBX Braz #4  
254-Synth Brass  
255-Real OBX Braz  
256-Synbrass Sect  
257-Synth Brass 1  
258-Synth Brass 2  
259-Mellow Synbrass  
260-Dyno Synbrass  
261-Analog Brazz

### Vintage Synths

262-Memorymoog #4  
263-Memorymoog Split  
264-Poly 2600 #1  
265-Poly ARP #1  
266-Poly ARP #2  
267-Elka 4  
268-Elka II  
269-Univox Piano #2  
270-Univox Piano #3  
271-Matrix 12  
272-Matrix 12 2  
273-Matrix 12 House  
274-Matrix 12 Rez 5  
275-Matrix 12 Soft 5

### Mellotrons

276-Chiffatron  
277-Mellotron  
278-Mellotron 1  
279-Mellotron 2  
280-Mellotron 3  
281-Tron Flutes  
282-Tron Flutes 2  
283-Tron Vox  
284-Tron Vox 2  
285-Tron Tapes  
286-Tron Tapes 2  
287-Tron Strings

## ANALEADS.K25

### Analog Lead Sounds

(73 Programs)

#### **Fusion**

200-Chick Lead 1  
201-Chick Lick  
202-Duke Lead 1  
203-Duke Lead 2  
204-Duke's Lead 3  
205-Control Formants  
206-Ewi Lead  
207-Ewi Lead 2 (CS)  
208-Porta Lead (CS)  
209-Ballad Lead

#### **Intervals**

210-Wakeman #2  
211-Wakeman #3  
212-Duo Synth  
213-Zawinul 2600  
214-Zawinul 2600 #2  
215-Quadra #1  
216-Quadra #2  
217-Quadra #3  
218-Maj/Min Break  
219-Dr. Dre Lead  
220-Lonely 5ths

#### **Minimoog**

221-Mini Lead #1  
222-Mini Lead #2  
223-Mini Lead #3  
224-Mini Lead #4  
225-Mini Lead #5  
226-Mini Lead #6  
227-Mini Lead #7  
228-Mini Lead #8  
229-Poly Mini  
230-Mini 2  
231-Poly Mini 2

#### **Pseudamentos**

232-PseudamentoCS  
233-Pseudamento 2  
234-Pseudamento 3  
235-Pseudamento 5  
236-Pseudamento 6  
237-Pseudamento 7  
238-MonoLead 1  
239-PRS Wow Lead

#### **Rock Leads**

240-Rich Raunch 1  
241-Rich Raunch 2  
242-Wakeman  
243-Wakeman#1  
244-Wakeman#4  
245-JR Lead 2  
246-Later Emerson  
247-DC Lead

248-Modular Lead  
249-Lucky Lead  
250-Mono Brass  
251-OB Brass  
252-SynBass Lead PRS  
253-Clock S&H Lead  
254-Fun Delay Square  
255-Square Pad  
256-TimsDukeyDick 1  
257-TimsDukeyDick 2  
258-AlaZawinul  
259-Lead Program  
260-Lead Program 2  
261-RezoLead Program  
262-Skinny Lead  
**Syncro Sounds**  
263-Car's Sync  
264-Car's Sync 2  
265-Classic Sync  
266-Sync  
267-Sync It !  
268-Prophet Sync 2  
269-Yo Mama !  
270-Velocitync 2  
271-Prophet Sync  
272-Velocitync 3

## ANAPADS.K25

Analog Pads

(47 Programs)

### **Analog String Pads**

200-Orch Pad 4  
201-Lore Pad  
202-MatrixMelostring  
203-String Like 2  
204-Eerie Synth Pad  
205-Resonator  
206-ARP Omni  
207-String Machine 1  
208-Synstring  
209-Mixpad

### **Classic Pads**

210-Mello Analog  
211-Oberheim Pad  
212-Prophet Pad  
213-Memorymoog #2  
214-Mister Softy  
215-OB-8 Pad  
216-Slo Generic OBX  
217-Prophet 5 Mello  
218-Prophet 5 Mello5  
219-Slo PWM  
220-Soft PWM  
221-Soft PWM 7

### **Philtered Pads**

222-Slow Filter  
223-JB Synth Pad  
224-Sawphaze  
225-Sawphaze 7th  
226-Solina Phaze  
227-Solina Phaze 2  
228-Solina Phaze 7th  
229-Sweep Pad  
230-AM Square Synth  
231-Matrix 12 Pad  
232-Matrix 12 Pad 5  
233-Matrix 12 Pad 5 II  
234-Slo SawPad  
235-Pad 5th

### **Soft Sawtooth Pads**

236-Another Pad  
237-Bag Slush Pod  
238-Big Lush Pad  
239-Slo Lush Pad  
240-Lo Pad 7 Split  
241-Matrix SoftPad  
242-Matrix SoftPad 5  
243-In the Air  
244-Ride Sweep  
245-Pulsar  
246-Scanners

## BASS.K25

Bass

(61 Programs)

### Dual Bases

200-Dual E Bass 1

201-Dual E Bass 2

202-Warm Dual Bass

### Picked or Fingered Bases

203-Sustain EBass 2

204-Fingered Bass

205-Fingered Bass 2

206-Picked Bass

207-Finger Bass

208-Warm Bass

209-E Bass & Ride

210-Ripper

### Slap Bases

211-Slap Bass 1

212-Slap E Bass Prs

213-Funk Me Bass

### Stylized Bases

214-Hammer Bass

215-Too Bad Bass

216-Walking Bass

217-No Frets

### Analog Synth Bases

218-Big Lo Bass

219-Big Mono Bass

220-2 Big Bases

221-Bass & Lead

222-Bass & Rhodes

223-Dubb Bass

224-Mooger Bass

225-Big Res Bass

226-AnalogBass D

227-Saw Bass

228-Synth Bass 1

229-WonderSynth Bass

230-Mondo Bass

231-Mogue Bass 2

232-Mogue Bass 3

233-Doom Bass

234-Matrix Big Bass

235-Matrix BigBass 3

236-Moogy Bass #1

237-Moogy Bass #2

238-Moogy Bass #3

239-Moogy Bass #4

240-Moogy Bass #5

241-Moogy Bass #6

242-Moogy Bass #8

243-ProphetPulsBass 2

244-ProphetPulsBass 3

245-ProphetPulseBass

246-Synth Bass 2

247-Synth Bass 3

248-Tuch Bass

249-Tuch Bass 2

### House Bases

250-Unison House

251-Pop Attack Bass

252-Slap House Bass

253-AnaHouse Bass

254-House Bass #3

255-House Bass #4

256-House Bass #5

257-House Bass #6

258-House Bass #7

259-Low BigBass 3

260-Low BigBass 4

## BELLS.K25

Bell Sounds

(28 Programs)

**Bell Pads**

200-Larabell

201-Space Bell 1

202-Metallic Pad

203-Fantasia

204-Space Bell 6

205-d50 Voce 2

206-Leningrad

207-With Tinklers

208-Lullaby

209-Tranquility

210-Tranquil Bell

211-PM'S Bell Pad

212-Digiphaze

213-Blistener

214-Simmbell

215-Bell Tree > Big Bell

**Percussive Bell Comps**

216-Crystal

217-DigiBell

218-Wave Bells

219-Little Metals

220-Clangorous

221-Gong Layers

222-Mallet Pad

223-Clockbells

224-Balarimba

225-Pinger

226-Belles

227-Toy Box

## BRASS.K25

### Brass & Winds

(68 Programs)

#### **Solo Trumpets**

200-Dynamic Trumpet

201-Solo trp mw vib

202-Miles Unmuted

203-Gentle trumpet

#### **Muted Trumpet Emulations**

204-Strght Mute Trpt

205-Muted trumpet 2

206-Sfz "mute" trp

207-20's Trumpet

208-Almost Muted

#### **Solo Trombones**

209-Trombone

210-Solo Trombone

211-Sfz Bone

#### **Bass Horn Emulations**

212-Tuba

213-Solo Bass Horn

#### **Solo Flutes**

214-Legato Flute

215-Legato Flute(prs)

216-Orchestral Flute

217-fast orch flute

218-wendy's Flute 2

219-Treble Flute

220-Jethro's Flute

221-JethroFlute(prs)

222-Baroque Flute 1

223-Baroque Flute 2

224-EchoFlute

#### **Piccolo Emulations**

225-Piccolo

226-Orch Piccolo 3

#### **Sax Emulations**

227-Tenor Sax

228-Kenny's Tenor

229-StreetCorner Sax

230-Get Real Bari

#### **Sax Sections**

231-Fake Sax

232-Hybrid Sax

233-Reed Section

234-Sax Section 8ve 1

235-Section Sax 2

#### **Brass Sections**

236-Tijuana Brass

237-Trp Section 1

238-Trps & Bones

239-Bri Trp & Bone

240-Trumpet & Bone

241-Hip Brass

242-Brass Section

243-Brass Band

244-Dyn Hi Brass B

245-Dyn Lo Brass B

246-Dyn Tbn & Hrn

247-Huge Brass 2

248-Huge Brass Too

249-SoftLowBrass B

250-Hall Horns

251-Mello Orch Brass

252-Chorale Brass 4

253-Soft Section 1

254-Soft BigBand 2

255-Big Band 3

256-Big Band 4

260-Trombone Section

261-Braz Sect

262-Orchestral Brass

263-SoftLowBrass

264-Spit Brass

#### **Brass and Strings**

265-Stacc. Brass & St

266-Brass & Strings

267-Huge Brass

## DIGITAL.K25

Digital Sounds

(63 Programs)

### Digital Leads

200-Carrie or Maud

201-FM Guitar 1

202-FM Guitar 2

203-FM Guitar 3

204-FM Guitar 5

205-FM Harmonica

206-FM Lead

207-Funfare Leadelay

208-Monolead 1

### AM Sounds

209-Shape Mod Rules !

210-VS-Type

211-Wave Table II

212-Velveteen

213-Digi Strange

### DigiBuzz

214-Buzz-a-Loo Too

215-Buzz-a-Loo

216-Digi Wet 2

217-The Buzz

218-Hybrid Sweep

219-Buzz Ofe

220-Cycler

221-Fuzz Lite 2

222-Growl

223-Cycler 2

224-Farr Feesah

225-Rezzysteppy

226-Whipstep

227-Deetudara II

228-Shap Mod Oscar

229-Backwards 2

230-Backwards 3

231-Backwards 4

### Digital Clavs

232-Klikomp too

233-Klikomp tree

234-CS Clav

235-Talking Clav 3

236-Klav Ennette

237-Shape 3

238-Shape 1

### DigiDistort

239-New Shaper

240-RAD wave 2

241-Buzz Slap

242-Rizzak

243-Chorusar II

244-Lowteeth

245-Digi Power

246-Microwave 2

247-Insect Klav Rise

248-Insectrise

249-FuzzFall

250-EP Lead

251-Ep Lead Too

### PPG's

252-PPG 9

253-Slo PPG 10

254-PPG 1

255-PPG 2

256-PPG 4

257-PPG 8

258-Shape 2

259-Shape 4

### Miscellaneous Digital Sounds

260-Cricketar

261-Piano Ring

262-StringBell

**DKICKSNR.K25**

Individual Kick And Snare  
Programs

(95 Programs)

*These are single layer kicks and snares  
ready to be imported into your own cus-  
tom drum programs. Programs whose  
names are in all capital letters are the  
unmodified kick and snare samples.*

**Kick Drums**

200-AMB KICK 1  
201-Tight Amb Kick 1  
202-Sharp Amb Kick 1  
203-AMB KICK 2  
204-Room Kick Drum 2  
205-Big Kick Drum 2  
206-Dyn Kick Drum 2  
207-Gate Kick Drum 2  
208-Rock Kick Drum 2  
209-Amb Kick DR 2eKT  
210-Crack Kick 2  
211-AMB KICK 3  
212-Fat Kick Drum 3  
213-Pad Kick Drum 3  
214-DRY KICK 1  
215-Beater Kick Drum  
216-Soft Kick Drum1  
217-Low Kick 1  
218-Dance Kick 1  
219-Dead Kick 1  
220-DRY KICK 2  
221-HighnDry Kick Dr  
222-SoftnDry Kick Dr  
223-Sub Kick Drum 2  
224-Noise Kick Drum  
225-High'n Low Kick  
226-Noisy Kick 2  
227-Fried Kick 2f  
228-Jazz Kick Drum 1  
229-Jazz Kick Drum 2  
230-Techno Kick 1  
231-little kick  
232-Klik Kick  
233-Cut Kick  
**SNARES**  
234-Kick Drums  
235-AMB SNARE 1  
236-Rock Snare 1  
237-Pop Snare  
238-Dance Snare  
239-Sharp Snare  
240-AMB SNARE 2  
241-Big Snare 2

242-Short Snare 2  
243-Deep Cut Snare 2  
244-Low Snare 2  
245-AMB SNARE 3  
246-Big Hall Snare 3  
247-Metal Snare 3  
248-High Snare 3  
249-Hard Snare 3  
250-sLow Snare 3  
251-Tight Snare 3  
252-Gated Snare 3  
253-Amb/Dry Snare MW  
254-DRY SNARE 1SOFT  
255-Short Soft Snare  
256-Dyn Dry Snare 1  
257-Deep Dry Snare 1  
258-DRY SNARE 1HARD  
259-Hard Attk DrySna  
260-Cracked Dry Snar  
261-Snappy Dry Snare  
262-DRY SNARE 2  
263-Open Snare 2  
264-PunchySnare 2  
265-Studio Snare2  
266-DRY SNARE 3  
267-Ringer Snare  
268-Roll Snare  
269-Harm Snare3  
270-Dual Dry Snare 1  
271-Dual Dry Snare 2  
272-Dual Dry Snare 3  
273-Snare Drum 1  
274-Snare Drum 2  
275-Brush 1  
276-Brush 2  
277-Brush 3  
278-Deep Brush  
279-Hard Brush  
280-Sharp Brush  
281-Harmful Brush  
282-Techno Snare 1  
283-Techno Snare 2  
284-Res Snare  
285-Snare w/Ring

# Appendix B

## K2000 Compatibility

### K2000 Compatibility Files

Included as part of your K2500 accessory disks are two disks of K2000 compatibility files, for your use when playing K2000 programs on the K2500. The Kurzweil K2000 has been a widely used platform for several years, and the VAST architecture and programming interface is largely the same in the K2500. Therefore, an attempt was made to organize the K2500 factory objects in a way most compatible with existing K2000 files. However, several improvements have been made to the Base ROM objects, and therefore not all K2000 support software will play correctly in a 2500 without some minimal translation.

The purpose of the files on the two K2000 compatibility disks is to allow you to play programs, sequences, and other objects that were created on a K2000, so that they can be re-saved in a "native" 2500 format.

If you never owned a K2000 and you do not have existing material programmed on the K2000, you probably do not need these files.

*Here are the main differences:*

**ROM Drum samples.** While most of the samples in the base ROM are compatible between the K2000 and the K2500, the drum samples are not. The K2500 drums are made from new recordings, and a slightly different selection of drums is offered (e.g., three ambient snares instead of four). Furthermore, where all drums and percussion had been grouped in one multi-root sample (Sample #20 Drums and Percussion), they are now available as separate samples addressed by number.

**ROM Effects programs.** These were re-programmed for greater signal-to-noise ratio, and re-organized for ease of use. The Effect page in the program editor always points to an Effect program, and has several parameters for real-time control. Many programs developed for the 2000 series utilized those factory default effects. When these programs are loaded into a K2500, they will not call the correct effect.

**ROM Keymaps.** An effort was made to keep instrument keymaps in the same order as in the K2000, because the keymap must be correct for a program to sound correct. Keymaps 20-38, 61, 70, and 173-176 have been replaced or deleted, and subtle improvements in volume have been made to others.

*About the compatibility files:*

There is one main file on this two disk set, K2KBASE.K25. It contains all the necessary objects for a K2500 to play any program made on a late model K2000, including drum and percussion samples. If you do not have sample memory, you can still use this file for some compatibility, but the drums will not play.

The idea is to temporarily overwrite the ROM in the K2500 with these objects, so that K2000 programs can be loaded, played, and then re-saved with their dependent objects.

If you use the compatibility files often, you will find that sometimes you only need to load some of the objects from the big file. This can be done with the Load Object feature. As a convenience, we have provided a file which only contains effects programs, K2KFX.K25, for one such case.

We also included a file for Orchestral ROM compatibility, K2KROM1.K25. It should be loaded in tandem with the K2KBASE.K25 file only if you have the Orchestral ROM option installed. (There are very few differences between the 2000 and the 2500 in the Orchestral ROM bank, so this file will rarely be used.)

## **Converting K2000 Files to K2500 Files**

There are five steps to convert a K2000 file to a K2500 file:

Before you start, make sure you have saved all user objects to disk, because memory will be cleared.

Step 1 Load the compatibility file as Everything/ Overwrite. (Everything/Merge mode will work too)

Step 2 Load the file(s) you wish to port into any memory bank from 200 through 800.

Step 3 Save these objects with dependents to new files.

Step 4 Delete everything.

Step 5 Load the new files to make sure they play correctly.

Happy porting.

## Converting programs from the K2500 to K2000

There may be times when you wish to take a file you have created for your K2500 and load it into a K2000. As we have mentioned in the above section on loading K2000 files into the K2500, most objects are compatible.

There are, however, a few things of which you should be aware. The following sections will explain.

### Programs using Drum samples

Since the K2500 has new drum samples, these programs will not translate correctly. The K2500 drum samples are not available on disk to be loaded into the K2000, so these programs simply can not be converted so that they will sound identical.

However, if you have some K2500 programs which take advantage of VAST programming and wish to use them in a K2000, you can load the program into the K2000, then edit the program to change the keymaps to the corresponding drum keymap. If the keymap is one of the 5 octave or 2 octave kit keymaps, you will find that for the most part, the type of percussion sound will match up, though there may be a few which don't. Keep in mind though that the sound itself may be quite different, since the samples are different.

### Effects Programs

The preset effects programs in the K2500 are different than in the K2000. However, since these effects programs consist simply of different values for the various editable parameters, a K2500 effect can be loaded into the K2000.

Here is the simplest way to include a K2500 effect in your file with the program. On the K2500, call up the program that you will be porting to the K2000. Press edit and go to the EFFECT page. Press edit again to enter the Effects Editor. Now press save to save that effect to RAM. Once it is saved, press exit. You will now see that the RAM effect is assigned to the program. Press exit and save the program before leaving the editor. If the effect was saved to the same bank as the program, and you are saving the entire bank, both objects will be saved to the file. If the effect was saved to a different bank or you are selecting only individual programs to be saved to disk, be sure to answer yes to the "Save Dependent Objects?" question and the effect will be saved along with the program.

If you have a great number of programs that you want to convert and don't want to edit each of those programs, there is another method you can use. You can create your own K2500 effects compatibility file, similar to the K2000 effects file. This method will require more work initially, but once it is done, the file can easily be used again and again.

To do this, start with the K2500 cleared of all RAM objects. (Go to Master and delete Everything.) Now go to Effects Mode, call up each effect one by one, going into the Effects Editor and saving that effect to RAM. Save the effect back to the exact same number it was originally at, choosing Replace. For instance, save effect #17 back to location #17. (If you have an editor/librarian software program for your computer, you can get all the effects in one shot and save them to the same RAM locations.) Now save an Everything file to Disk. You now have a file similar to the K2KFX.K25 file on the compatibility disks. You can use the exact same set of five steps documented in the section on converting K2000 files to the K2500, but this time you will be loading the files into the K2000. (Don't forget to delete Everything in the K2500 when you are done creating the compatibility file.)

## Keymaps

The following keymaps are either different in the two instruments, or they do not exist in the K2000: 20-30 & 173-191. (Keymaps 169-172 have different names in the K2500 but are identical to the ones in the K2000.) Keymaps 23-30 & 189-191 use drum samples and are therefore can not be converted to the K2000 (see the section on Drum Samples, above). But keymaps 20-22 & 173-188 can easily ported to the K2000. To do this, you will follow the same procedure used to convert effects programs, documented above. Follow those exact steps, but instead of going to the EFFECT page, go to the KEYMAP page in the Program Editor.

## Additional Considerations

### Impact

Impact, on the ENVCTL page, is a feature that is new with the K2500. Keep Impact set to zero if you are planning to use a program on the K2000.

### Amplitude Envelopes

The K2500 Amplitude Envelope page allows for attack times that are quicker than those allowed by the K2000. Keep in mind, then, that a program with an attack amplitude faster than .02 seconds will be automatically adjusted by the K2000 to use a slightly slower attack time.

## Appendix C

# Stereo Piano ROM

The Stereo Piano ROM option adds 4 Megabytes of Stereo Piano samples to your K2500, and also enables you to upgrade your sounds further with the 8 Megabyte Orchestral ROM and the 8 Megabyte Contemporary ROM. The Stereo Piano Option adds objects in the 700s bank. There you will find new programs, keymaps, samples, and a new effect - "709 Soundboard/Rvb".

### Monaural Piano Programs

Most of the new piano programs are set to play in stereo, though "780 MonoStudioGrand," as well as a number of programs on the accessory disk are designed for mono use. If the pianos are to be played through a mono sound system, the best results will come from these mono programs, not the stereo programs mixed to mono.

### Stretch Tuning

Unless otherwise noted, piano programs are "stretch" tuned, like an acoustic piano. Since the higher harmonics of a stretched string tend to be sharper than those of the real harmonic series, stretch tuning ensures that the piano remains in tune with itself harmonically. Stretch tuning is sometimes referred to as "solo" or "beat" tuning.

Keymaps with "440" as part of their name - such as "776 Mono Piano 440" offer straight (non-stretch) tuning, where the fundamental of each note is tuned to A440. Programs that use these keymaps (e.g., "777 Piano for Layers") will mix better with other acoustic and electronic instruments. This type of tuning, therefore, is sometimes known as "ensemble" tuning.

## Stereo Piano ROM Programs

As shown below, the number of programs added to the 700s bank will depend on whether you have also added the Orchestral and/or Contemporary ROM options. Contact your Young Chang / Kurzweil dealer if you are interested in these additional upgrades.

Piano ROM only		...with Orchestral ROM		...with Contemporary ROM	
770	Concert Piano 1	788	Piano Trio	794	Water Piano
771	Studio Grand	789	Pno & Syn String	795	StPno & OrchPad
772	Brt Grand & Str	790	Fluid Grand	796	Grand & Pad
773	Stereo Solo Pno	791	Haunted Piano	797	Pop Grand Stack
774	Brt Concert Pno	792	Xylopiano	798	Prepared Piano
775	Concert Piano 2	793	Grand,Harp&Lead	799	Tack Piano Stack
776	Soft Piano				
777	Piano for Layers				
778	Rok Piano				
779	RandomPan Grand				
780	MonoStudioGrand				
781	Grand & Elec 1				
782	Grand & Elec 2				
783	St Pno & Vox Pad				
784	Funky Piano				
785	E Grand Stack				
786	Way Dark Piano				
787	Piano Chase				

## Stereo Piano ROM Keymaps

770	Stereo Piano	<i>Both sides of stereo image can be edited at the same time to preserve image stability.</i>
771	Piano Left	<i>These two keymaps are the same as 770, but either side of the stereo image may be edited independently.</i>
772	Piano Right	
773	Pno440 Left	<i>These two keymaps are non-stretched 440 tuned, for use when layering with other non-piano keymaps so that the upper notes are in tune.</i>
774	Pno440 Right	
775	Mono Piano	<i>This is a stretch tuned mono keymap consisting of the best quality samples from either left or right portions of the stereo samples.</i>
776	Mono Piano 440	<i>This is a non-stretch tuned mono keymap consisting of the best quality samples from either left or right portions of the stereo samples.</i>
777	Hybrid Piano 1	<i>This is a mono keymap consisting of samples not used in 775.</i>
778	Way Dull Piano	<i>This keymap is specifically designed for program 786 "Way Dark Piano".</i>

## Stereo Piano ROM Samples

770	StereoPiano b0
771	StereoPiano e1
772	StereoPiano a1
773	StereoPiano d2
774	StereoPiano a#2
775	StereoPiano d3
776	StereoPiano a3
777	StereoPiano c#4
778	StereoPiano f4
779	StereoPiano b4
780	StereoPiano f5
781	StereoPiano b5
782	StereoPiano e6
783	StereoPiano a6
784	StereoPiano a6NR
785	StereoPiano e7
786	Piano Left
787	Piano Right

## Stereo Piano ROM Programs with Controller Assignments

This list describes how each of the Stereo Piano ROM programs can be modulated or altered by the various MIDI controls. Only those controls which may not be immediately evident are listed. Controls such as attack velocity and keynumber are understood to be assigned to most programs.

Prg #	Program Name	Mod Wheel	Data	MPress	Comments
770	<b>Concert Piano 1</b>				General purpose stereo piano for solo playing. Uses several layers, providing specific filter settings and curves for different key ranges and strike levels. Soft pedal replaces all layers with layer 1 - voiced to emulate <i>una corda</i> (u.c.) sound.
771	<b>Studio Grand</b>				Dynamics and brightness compressed for easy control and mixing with other instruments. Soft pedal emulates <i>una corda</i> (u.c.) sound.
772	<b>Brt Grand &amp; Str</b>	String Balance	String Brightness		
773	<b>Stereo Solo Pno</b>				Specifically for classical solo piano, using wider dynamic range and more sustained envelope. Soft pedal emulates <i>una corda</i> (u.c.) sound.
774	<b>Brt Concert Pno</b>				Similar to Concert Piano 1, but filter velocity curves exaggerated for easy dynamics; Hard strikes very bright. Soft pedal emulates <i>una corda</i> (u.c.) sound.
775	<b>Concert Piano 2</b>				Suitable for solo playing. Easily edited, and may be played on a non-drum channel.
776	<b>Soft Piano</b>				
777	<b>Piano for Layers</b>				Import this template to other programs to create piano combinations. Its 440 tuning controls beating in the upper range when layered with other waveforms.
778	<b>Rok Piano</b>		Wet/Dry Mix		
779	<b>RandomPan Grand</b>		Wet/Dry Mix		The two sides of the stereo sample are played by independent layers. Since the layers are not synchronized, slight variations in note starts between them create an unstable stereo image.
780	<b>MonoStudioGrand</b>		Treble Boost		Monaural sample; a hybrid of the left and right channels of the stereo recording. Use mono programs such as this in live performance with mono PA systems. Soft pedal emulates <i>una corda</i> (u.c.) sound.
781	<b>Grand &amp; Elec 1</b>	String Balance	Wet/Dry Mix		
782	<b>Grand &amp; Elec 2</b>	Treble Boost	Wet/Dry Mix		
783	<b>St Pno &amp; Vox Pad</b>	Vibrato	Pad Swell		
784	<b>Funky Piano</b>	Wah Rate		Filter Freq.	
785	<b>E Grand Stack</b>	Pad Balance			
786	<b>Way Dark Piano</b>				
787	<b>Piano Chase</b>	Vibrato	Wet/Dry Mix	Vibrato	

## Stereo Piano ROM

## Appendix D

# Orchestral ROM

The Orchestral ROM Soundblock option adds 8 Megabytes of samples, including a full array of winds, brass, and strings. The Orchestral ROM Upgrade adds objects in the 900s bank. There you will find programs, keymaps, samples, effects, performance setups, and QA banks. All Orchestral ROM sounds can be combined with your existing 8 Megs of base sound ROM, 4 Megs of Stereo Piano ROM, and 8 Megs of (optional) Contemporary ROM.

## Orchestral ROM Effects

900	Rich Delay
901	Glass Delay
902	Real Plate
903	Real Niceverb
904	ClassicalChamber
905	Empty Stage
906	Long & Narrow
907	Far Bloom
908	New Hall w/Delay
909	With A Mic

## Orchestral ROM Programs

### Orchestras

900	TotalCntrl Orch1
901	TotalCntrl Orch2
902	BaroqueOrchestra
903	Oboe&Flute w/Str
904	Horn&Flute w/Str
905	Trp&Horns w/Str

### Winds

906	Piccolo
907	Orchestra Flute
908	Solo Flute
909	Orchestral Oboe
910	Solo Oboe
911	2nd Oboe
912	Orch EnglishHorn
913	Solo EnglishHorn
914	Orch Clarinet
915	Solo Clarinet
916	Orch Bassoon
917	Solo Bassoon
918	Woodwinds 1
919	Woodwinds 2

### Brass

920	Dynamic Trumpet
921	Copland Sft Trp
922	Orch Trumpet
923	Soft Trumpet
924	Strght Mute Trp
925	French Horn MW
926	Slow Horn

## Orchestral ROM Programs with Controller Assignments

The preset programs in the K2500 Orchestral ROM are organized by category. You can either use them as they are or as a good starting point for your own work. There are many ways to put expressivity and variety in a single program by assigning MIDI controllers to the various DSP functions in its layers. This list describes how each of the preset programs can be modulated or altered by the various MIDI controls. Only those controls which may not be immediately evident are listed. Controls such as attack velocity and keynumber are understood to be assigned to most programs.

Prg #	Program Name	Mod Wheel	Data	MPress	Comments
<b>Pianos</b>					
788	Piano Trio		Ride cymbal fade	Vibrato - Bass	
789	Pno & Syn String	String fade	String swell		
790	Fluid Grand		Wet/Dry mix		
791	Haunted Piano	Harp balance	Wet/Dry mix		
792	Xylophano	Release ctl	Wet/Dry mix		
793	Grand,Harp&Lead	Lead tremolo	Lead fade	Lead tremolo	Sustain pedal does not affect the lead sound
<b>Orchestras</b>					
900	TotalCntrl Orch1	Layer bal	Adds brass & flute, boosts strings	Swell (trp out - ww solo)	
901	TotalCntrl Orch2	Layer bal, adds harp	Layer balance, adds horns / cuts woodwinds	Swell	
902	BaroqueOrchestra	None	None	Swell	Sost ped disables brass
903	Oboe&Flute w/Str	Strings fadeout	Disables strings	None	
904	Horn&Flute w/Str	Strings fadeout	Disables strings	None	
905	Trp&Horns w/Str	Strings fadeout	Disables strings	None	
<b>Winds</b>					
906	Piccolo	None	Wet/Dry mix	None	
907	Orchestral Flute	Envelope control (slower)	Wet/Dry mix	None	
908	Solo Flute	Timbre (brighter)	Wet/Dry mix	None	
909	Orchestral Oboe	Swell	Wet/Dry mix, rate & depth	Vibrato	
910	Solo Oboe	Vibrato off	Wet/Dry mix	Swell	
911	2nd Oboe	Vibrato off	Wet/Dry mix	Swell	
912	Orch EnglishHorn	Swell	Wet/Dry mix, rate & depth	Vibrato

## Version 2 Orchestral ROM Setups with Controller Assignments

A setup is a combination of eight zones, each having its own MIDI channel and controller assignments. Designed initially for models with built-in keyboards, setups can be played on K2500R via the Local Keyboard Channel feature: Find this parameter in MIDI mode on the RECV page, change it from None to a channel of your choice, and set your controller to send on only that channel. Now, any notes or MIDI controller data that come in on that channel will be re-mapped according to the display channel (in program mode) and according to the setup (in Setup mode).

To take advantage of Version 2's eight zone setup capability, there are 51 new setups in the Version 2 Orchestral ROM Objects. You will find unique internal program combinations, arpeggiator examples, and special ribbon and controller functions. With as many as 24 assignable controllers shared among 8 independent zones, K2500 MIDI setups can be quite powerful, and they require some experimentation to find all their features and nuances. In order to make this process easier, many setups are programmed according to the certain conventions. The sliders generally provide mixing capabilities either as group faders or individual zone faders. They also provide control over timbre, effects mix, and clock tempo. Other conventions include:

<u>Controller</u>	<u>Default</u>
Slider G:	Wet/Dry mix
Slider H:	Tempo
PSw 1:	Arp on/off
Psw 2:	Latch2
Footswitch 1:	Sustain
Footswitch 2:	Sostenuto
Footswitch 3:	Soft Pedal
Large Ribbon:	Pitch
Small Ribbon Press:	Mono Pressure
Small Ribbon Lin:	Pitch
Mod Wheel:	Mod Wheel
MPress:	MPress

These are the Setups provided in the Orchestral ROM:

900	<b>Deep Piano Rbn</b>	Sliders A-C: zone faders; Lg Rib : fx depth, arp vel & pan (celeste); ModWhl: sleigh mod; PSw2: zone mute (celeste)
901	<b>Choir &amp; Harp</b>	Sliders A-B: zone faders; FootSw1: arp latch; FootSw2: zone mute; Lg Rib: tempo; PSw2: harp octave
902	<b>Orchestrator</b>	Sliders A-D: zone faders, Slider F: key vel cym roll; FootSw3 solos vox pad; Lg Rib: cym roll; ModWhl: low string balance
903	<b>Piano Concerto</b>	Sliders A-D: group faders; FootSw1: mutes pizz; PSw1: piano solo
904	<b>Xmas Carols</b>	Sliders A-D: group faders
905	<b>Sideline Perc</b>	Sliders A-D: group faders, Slider F: key vel cym roll; FootSw1: glock roll; Lg Rib: cym roll; PSw1 & 2: mute groups

906	<b>TonalGroov C5-&gt;</b>	Sliders A-D: zone faders; FootSw1: latch; ModWhl: enables shaker & detunes conga; PSw1: mute group
907	<b>Exotic Grooves</b>	Sliders A-D: zone faders; FootSw1: arp latch; ModWhl: percussion pitch; PSw1: mute group
908	<b>Lunar Harp</b>	Sliders A-D: zone faders; Lg Rib: detuned harps; ModWhl: sleigh mod
909	<b>Themes</b>	Sliders A-D: zone faders; FootSw2: arplatch; Lg Rib: string & choir Xfade; ModWhl: string balance
910	<b>Wet Piano</b>	Sliders A-C: zone faders; ModWhl: pad balance
911	<b>enter the Jester</b>	Sliders A-D: group faders; Slider E: string balance; Lg Rib: glockenspiel trigger; ModWhl: vibrato disable
912	<b>Tap the Jester</b>	Sliders A-E: zone faders; Lg Rib: glockenspiel trigger
913	<b>Hybrid Strings</b>	Sliders A-C: zone faders, Slider D: synstring balance
914	<b>Wonderous Spaces</b>	Sliders A-D: zone faders; Lg Rib: pad balance & sleigh pitch
915	<b>Metal Orch Pad</b>	Sliders A-C: zone faders, Slider F: key vel (bells); Lg Rib: bell trigger; ModWhl: bell balance
916	<b>Toon prs</b>	Sliders A-D: zone faders, Slider F: key vel (glock); Lg Rib: glockenspiel trigger, pitch (perc); PSw2: group mute; Press: tempo
917	<b>Tranquil Sea</b>	Sliders A-D: zone faders, Slider E: piano detune; ModWhl: sleigh mod
918	<b>Sick Clock Jam</b>	Sliders A-E: zone faders; ModWhl: pitch bend clock sounds, filter mod bass; PSw1: arp latch
919	<b>Orc Split</b>	Sliders A-B: zone faders; ModWhl: RH string balance
920	<b>Baroque Brass</b>	Sliders A-B: zone faders; Lg Rib: MPress
921	<b>Unison Orchestra</b>	Sliders A-D : group faders;; FootSw1: winds solo, FootSw2: pizz; PSw1: triggers cymbal cras; PSw2: pizz
922	<b>Unison w/Pizz</b>	Sliders A-F: zone faders; FootSw: 1 winds solo
923	<b>Switch Orchestra</b>	Sliders A-E: group faders; Lg Rib: timpani roll (to B3); PSw1 & PSw2: mute group; MPress: timpani roll (to B3)
924	<b>Pizz/Str/Winds</b>	Sliders A-E: zone faders; Lg Rib: timbre ctl
925	<b>Harp Arps Cmaj</b>	Slider A: zone fader, Slider B: keyvel, Slider C: harp octave enable; FootSw1: arp latch, FootSw2: latch2; Lg Rib: harp arps; ModWhl: harp filter; PSw2: ribbon arpeggio select
926	<b>Desert Bloom E1</b>	Sliders A-F: zone faders; PSw2: zone mute (aux. percussion)
927	<b>Exotic Charge</b>	Sliders A-C: zone faders; ModWhl: timbre ctl
928	<b>ET Comes Home</b>	Sliders A-B: group faders; FootSw: 1 arp latch; Lg Rib: Expression (harp arpeggios); ModWhl: string balance

929	<b>Fanfare Orch</b>	Sliders A-C: group faders; Lg Rib: snare & timp roll (G1-F#2); ModWhl: low brass balance; PSw1: disagle snare & timp roll, PSw2: triggers Tam Tam; MPress: snare roll (G1-F#2)
930	<b>Switch Orch 2</b>	Sliders A-D: zone faders; ModWhl: fades woodwinds; PSw1: mute group, PSw2: timbre select
931	<b>Orbiting Venus</b>	Sliders A-D: group faders; ModWhl: pad LFO rate; PSw1: zone mute
932	<b>Glass Dulcimer</b>	Sliders A-D group faders, Slider F: keyvel; Lg Rib: syn. dulcimer note trigger; ModWhl: syn. dulcimer envelope filter
933	<b>Hybrid Reeds</b>	Sliders A-B: zone faders
934	<b>Two Hand Pizz</b>	Sliders A-D: zone faders; ModWhl: pizz timbre
935	<b>Slo Str &amp; Horn</b>	Sliders A-B: group faders; ModWhl: string fade
936	<b>Pianist Band</b>	Sliders A-E: zone faders; Velocity triggers left hand kicks and RH snares
937	<b>Prepared Pianos</b>	Sliders A-C: zone faders
938	<b>FSW1 solo winds</b>	Sliders A-F: zone faders; FootSw1 holds strings & solos winds; ModWhl: string fade
939	<b>Strings&amp;Winds</b>	Sliders A-F: group faders
940	<b>Str Ens Solo MW</b>	Sliders A-E: zone faders; ModWhl: solo strings; PSw2: slow passages
941	<b>Pno&amp;Vox&amp;Pizz</b>	Sliders A-E: group faders; ModWhl: timbre ctl
942	<b>Down Wind SmRbn</b>	Sliders A-D: zone faders; Sm Rib Press: wind trigger; Lg Rib: wind speed; PSw1: wind sost ped, PSw2: guitar / piano select
943	<b>Guitar &amp; Piano</b>	Sliders A & B: group faders; ModWhl: disables classical guitar release noise
944	<b>Cirrus 9</b>	Sliders A-C: group faders; Slider D: harp octave enable; FootSw2: latch2; Lg Rib: pad filter ctl; PSw2: mute group
945	<b>Dry Plucks</b>	Sliders A-C: zone faders
946	<b>String Collage</b>	Sliders A-C: zone faders; ModWhl: string ensemble timbre
947	<b>Esoterica</b>	Sliders A-E: zone faders; MPress: sound f/x expression
948	<b>Poseidon</b>	Sliders A & B: group faders
949	<b>Stalkers</b>	Sliders A-C: group faders; FootSW: 1 arp latch; ModWhl: bell/percussion pitch bend
950	<b>Diabolic Trickle</b>	Sliders A-C: group faders; FootSw: 1 arp latch; Lg Rib sec: 1: bell pitch bend, sec 2: explosion mod, sec 3: explosion pitch; ModWhl: pad timbre; PSw2: explosion trigger

## About the Control Setup

The default Control Setup (97 Control Setup) has been updated. Sliders B-H are now assigned to MIDI controller numbers 22-28. CC pedal 1 is now assigned to MIDI controller 4. These default settings will make it easier to assign control sources from within the Program editor.

## Mirror Image Drum Map

The Mirror Image Drum Map is a drumkit layout that enables a natural two-hand style of playing. The Mirror Image Drum Map gets its name by its instruments being laid out in a mirror image of itself with D4 being the point of reflection.

### Getting Started

Play the key, D4. You'll notice that snare drum is assigned to it. From there, play 1 semitone down (C#4), and up 1 semitone (D#4). Notice that the two are the same snare drum. Play 2 semitones down (C4) and up 2 semitones (E4). Notice that the same bass drum is assigned to both keys. (Bass drum is also repeated on E3 and C4, which is particularly useful in fast double bass drum playing.) Notes 3 semitones down, and up 3 semitones, have the same hi-hat, etc.

There are, however, two instances – G4 and E6 – where the left and right sides do not match. They deviate from the mirror image scheme to accommodate the more familiar one hand playing of hi-hat and tambourine.

The layout of the drums and various percussion instruments are easy to remember. Just keep in mind that the basic drumkit consisting of Snare, Bass Drum, Toms, and Cymbals are in the range of C3-E5, or the “inner core” range. The two remaining ranges (C2-B2 and F5-C7) which extend out to the left and right edges of the keyboard make up the “outer edge” range, and will generally consist of auxiliary percussion instruments. This “inner” and “outer” range structure is also maintained in the drum corps programs (#977, #980) and orchestral percussion programs (#978, #979).

It is easy to memorize the placement of instruments if you think of the double and triple groupings of the black keys as one instrument or instrument type. Look at the center group of black keys, C#4 and D#4. Think of that grouping as the snare drum. Fanning out on both sides to the next group of black keys, F#3, G#3, A#3 on the left hand side, and F#4, G#4, A#4 on the right hand side, are the toms. Fanning out farther to the next set of double black keys are the cymbals. The next set of triple black keys are the timbales, and the next set of double black keys are the congas. The four white keys under the toms are the hi-hats.

In the “outer edge” range, white keys are generally hand-held percussion toys or various useful articulations of the congas laid out such that one can play typical conga patterns with one hand.

Try playing in a straight eighth note beat D#2, E2, F2, D#2, E2, F2, C2, C#2 and repeat. For easy right-hand tambourine playing, try playing in the same eighth note beat C7, A6, E6, C7, A6, E6, C7, A6 and repeat. Now combine the left-hand conga part and the right-hand tambourine. A combination of easily fingered patterns will often yield a useful rhythm section.

### Sostenuto Pedal

One more bonus was added to the drumkit programs—the sostenuto pedal. Just hold down the sostenuto pedal and again play in a steady eighth note beat E3, G3, A3, B3, G3, A3, B3, G3 and repeat. The sostenuto adds percussion to the white keys ranging from F3 to C4, and C#4.

## Sticking

The Mirror Image Drum Map lets you simulate the sticking that a real drummer would use. Try playing a tom tom fill from hi tom to low tom using a paradiddle sticking (RLRRLRL). This should be very easy to execute with minimal physical motion. The symmetrical inward-outward motion also feels comfortable and smooth. Doubling or layering of instruments while maintaining the beat is as easy as grabbing chords. A good example of this can be illustrated with program 977, "Big Drum Corps".

Play a steady repeating sixteenth note snare drum pattern with your left and right thumbs alternating on the keys, C#4 and D#4. Keep that same left, right, left, right hand motion going but simply add your index fingers to play the next black keys which would be A#3 in the left hand and F#4 in the right hand. Finally, add the ring finger for the low tom on F#3 and A#4. If you look at your hands now the right hand is making an E flat minor chord and its mirror image chord, F# Major, is in the left hand. After playing with the drum programs you'll notice how easy it is to play multiple drums in unison or to add or drop a tom or crash cymbal while maintaining a continuous flow of rhythm.

For those of you who prefer the old Kurzweil drum map for the drumkit programs, it is available on the Controller slider.

Drumkit Programs: 984, 985

Drum Corps Programs: 977, 980

Orchestral Percussion Programs: 978, 979

## Appendix E

# Contemporary ROM

The Contemporary ROM Soundblock option adds 8 Megabytes of samples to your K2500. These include ethnic percussion, electronic and processed drum sounds, electric guitars, synthesizer waveforms, contemporary keyboards, wind instruments, and much more. Combined with the powerful on-board Variable Architecture Synthesis Technology (VAST) capabilities of your K2500, this new palette of sounds gives your instrument unmatched potential.

The Contemporary ROM Upgrade adds objects in the 800s bank. There you will find 100 programs, 94 keymaps, 94 samples, 10 effects, 51 performance setups, and 11 QA banks. All new sounds can be combined with your existing 8 Megs of base sound ROM, 4 Megs of Stereo Piano ROM and 8 Megs of (optional) Orchestral ROM.

## Contemporary ROM Programs with Controller Assignments

The 100 preset programs in the K2500 Contemporary ROM are organized by category. We hope you will find these programs to be a good starting point for your own work. There are many ways to put expressivity and variety in a single program by assigning MIDI controllers to the various DSP functions in its layers. This list describes how each of the 100 factory preset programs can be modulated or altered by the various MIDI controls. Only those controls which may not be immediately evident are listed. Controls such as attack velocity and keynumber are understood to be assigned to most programs.

Prg #	Program Name	Mod Wheel	Data	MPress	Comments
<b>Pianos</b>					
794	<b>Water Piano</b>	Vibrato	Wet/Dry mix	Vibrato	
795	<b>StPno &amp; OrchPad</b>	Pad balance			
796	<b>Grand &amp; Pad</b>	Pad balance	Bell release envelope		
797	<b>Pop Grand Stack</b>	Bell fade	Wet/Dry mix	Vibrato	
798	<b>Prepared Piano</b>	Alt switch - mbira	Wet/Dry mix		
799	<b>Tack Piano Stack</b>	Bell fade, Wet/Dry mix	Pitch env - mbira		
<b>Ethnic/World Instruments</b>					
800	<b>Jungle Jam</b>	This program uses the mirror image drum mapping, symmetrical around D4. Identical or similar drum articulations are found at equal distances above and below D4, with extras outside the center region. Mod wheel disables layered "chirps" and fades rain stick on A0. Data slider enables "screamers" on G5-C6.			
801	<b>Mbira Stack</b>	Vibrato			
802	<b>Ritual Metals</b>	Vibrato		Vibrato	
803	<b>Prepared Mbira</b>		Pitch change		
804	<b>Balinesque</b>	Pan flute fade			
805	<b>Ambient Bells</b>	Vibrato		Vibrato	
806	<b>World Jam 1</b>		Pitch change		Mirror image drum mapping
807	<b>World Jam 2</b>		Pitch change	Layer pitch	Mirror image drum mapping
808	<b>India Jam</b>	Tablas appear at center with the mirror-image mapping, tuned to C. Pressure controls pitch for the bayan and RH lead sound. LH drone may be played as broken chord C2,G2,C3,G3 and held with sustain or sostenuto. Mod Wheel fades the drone. Data Slider controls Wet/Dry mix.			
809	<b>Slo Wood Flute</b>	Less tremolo		Filter ctl	
810	<b>Hybrid Pan Flute</b>	Tremolo		Tremolo	
811	<b>Chiff Brass Lead</b>	Vibrato, Swell	Unison layers	Vibrato, Filter	
812	<b>Bell Players</b>	Muzhar fade	Tibetan cym env ctl		
813	<b>Prs Koto</b>			Pitch mod	

Prg #	Program Name	Mod Wheel	Data	MPress	Comments
814	<b>Medicine Man</b>				
815	<b>Mbira</b>	Release ctl	Tremolo		
816	<b>Kotobira</b>	Mbira balance			
817	<b>Cartoon Perc</b>		Wet/Dry mix		
818	<b>CowGogiBell</b>	Alt start	Layer select

828	<b>Bad Klav</b>				
829	<b>Rad Rotor</b>	Rotary speaker			
830	<b>B-2001</b>	Rotary speaker	Perc balance	Rotary speaker	
831	<b>Perc Organ</b>	Rotary speaker	Perc balance	Rotary speaker	
832	<b>Drawbar Organ CS</b>	Rotary speaker	Filter ctl		
<b>Brass &amp; Reeds</b>					
833	<b>Bebop Alto Sax</b>	Attack ctl		Vibrato	
834	<b>Soft Alto Sax</b>			Vibrato, Swell	
835	<b>Soprano Sax</b>	Vibrato, Swell		Vibrato, Swell	
836	<b>Low Soft Sax</b>			Vibrato	
837	<b>Air Reeds CS</b>	Vibrato	Harmonica enable	Harmonica vibrato	
838	<b>Jazz Muted Trp</b>				
839	<b>Jazz Lab Band</b>			Vibrato, Swell	
840	<b>Harmon Section</b>	Vibrato		Vibrato, Swell	
841	<b>Sfz Cres Brass</b>	Vibrato	Wet/Dry mix	Vibrato, Swell	
842	<b>Neo Stabs</b>	Vibrato		Vibrato, Filter ctl	
843	<b>Gtr Jazz Band</b>	LH bass is layered with ride for walking rhythm section. LH hard strikes trigger kick/snare. Data slider switches RH from guitar to horn section; SostPed holds horns and adds bright tenor.			
844	<b>Full Rock Band</b>	LH bass is layered with kick/snare for driving rhythm section. At <i>ff</i> , crash cymbal is triggered. Mod wheel and pressure enable rotary speaker for RH organ. Data slider switches LH to walking rhythm section, and RH to guitar solo.

## Contemporary ROM Setups

A setup is a combination of eight zones, each having its own MIDI channel and controller assignments. Designed initially for models with built-in keyboards, setups can be played on K2500R via the Local Keyboard Channel feature: Find this parameter in MIDI mode on the RECV page, change it from None to a channel of your choice, and set your controller to send on only that channel. Now, any notes or MIDI controller data that come in on that channel will be re-mapped according to the display channel (in program mode) and according to the setup (in Setup mode).

To take advantage of Version 2's eight zone setup capability, there are 51 new setups in the Version 2 Contemporary ROM Objects. You will find unique internal program combinations, arpeggiator examples, and special ribbon and controller functions. With as many as 24 assignable controllers shared among 8 independent zones, K2500 MIDI setups can be quite powerful, and they require some experimentation to find all their features and nuances. In order to make this process easier, many setups are programmed according to the certain conventions. The sliders generally provide mixing capabilities either as group faders or individual zone faders. They also provide control over timbre, effects mix, and clock tempo. Other conventions include:

<u>Controller</u>	<u>Default</u>
Slider G:	Wet/Dry mix
Slider H:	Tempo
PSw 1:	Arp on/off
Psw 2:	Latch2
Footswitch 1:	Sustain
Footswitch 2:	Sostenuto
Footswitch 3:	Soft Pedal
Large Ribbon:	Pitch
Small Ribbon Press:	Mono Pressure
Small Ribbon Lin:	Pitch
Mod Wheel:	Mod Wheel
MPress:	MPress

Here are the Setups provided in the Contemporary ROM:

800	<b>HyperGroov&lt;-C4-&gt;</b>	Sliders A-D: group faders; PSw1: mute group
801	<b>PianoPad w/Percs</b>	Sliders A-C: group faders; FootSw: 1 arp latch, FootSw 2: latch2; Lg Rib: pan (perc & bells); PSw1: arp sw & mute group
802	<b>Slo Held Arper</b>	Sliders A-D: zone faders, Slider F: key vel (zone 4); Lg Rib: mark tree
803	<b>Don'tGetFooled</b>	Sliders A-B: group faders, Slider C: alternate left hand, Slider D: left hand release ctl; PSw1: RH organ select
804	<b>Touch Game</b>	Sliders A-B: group faders, Slider C: timbre (bass); PSw1: arp latch; right hand hard strikes trigger horns; left hand hard strikes enable clav
805	<b>BeatBoy E1</b>	Sliders A-C: group faders; PSw1: arp latch; Press: filter sweep (zone 6)

---

806	<b>ZawiClav Split</b>	Sliders A-C: group faders; PSw1: group toggle (lead)
807	<b>Dyn Piano Pad</b>	Sliders A-B: group faders
808	<b>Pulsar Stack</b>	Sliders A-B: group faders, Slider C: pulsar filter ctl, Slider D: pulsar impact, Slider E: pulsar rel ctl; Lg Rib: pulsar filter ctl; PSw 1: pulsar switch, PSw2: bass mute
809	<b>Mt Chicorora C2</b>	Sliders A-B: group faders; L g Rib sec 1: pitch (perc), sec 2: pitch (lead), sec 3: filter freq (hybrid horn); PSw1: arp latch, PSw2: latch2 & sost pedal (guitar)
810	<b>Hold Low 3sec Rb</b>	Sliders A-E: group faders, Slider F: timbre (bass); Lg Rib sec 1: arp vel, sec 2: pitch (lead), sec 3: resonance (bass); Sm Rib Press: cym sustain; ModWhl: resonance (bass); PSw1: arp latch
811	<b>Mettlorfus Pad</b>	Sliders A-B: group faders; PSw1: arp latch
812	<b>Black Keys xtra</b>	Sliders A-C: zone faders; ModWhl: release (snare) & chirp enable (zone 1)
813	<b>Jungle Jammer</b>	Sliders A-B: zone faders; FootSw1: arp latch; FootSw2: latch2
814	<b>Huge Rock Band</b>	Sliders A-C: zone faders; PSw1: guitar solo; Press: pitch up (guitar solo)
815	<b>Rock Ballad</b>	Sliders A-D: group faders
816	<b>Jazz Setup</b>	Sliders A -B: group faders (band); FootSw2: harmon sect mute; PSw2: piano solo
817	<b>Two Touchers</b>	Sliders A-D: zone faders
818	<b>Frontier prs</b>	Sliders A-C: zone faders; Press: mark tree
819	<b>Eclectric Grand</b>	Sliders A-C: zone faders
820	<b>Bad Trip FtSw/MW</b>	Sliders A-D: zone faders, SliderE: decay ctl, Slider F: key vel (mod wh bells); ModWhl: key num for bells; Lg Rib & FootSw1: vox trip; PSw2: panic (vox trip)
821	<b>WhirliToys</b>	Sliders A-C: group faders; FootSw1: arp latch; FootSw2: latch2
822	<b>PluckSynths Perc</b>	Sliders A-C: group faders; PSw2: mute group
823	<b>SusPed RhythmJam</b>	Sliders A-D: zone faders
824	<b>Ballad Piano Pad</b>	Sliders A-B: zone faders; ModWhl: bells fade
825	<b>Big AnaLoveVibe</b>	Sliders A-C: zone faders; ModWhl: port time
826	<b>Shock Breaks</b>	Slider A: fader
827	<b>Four Pluckers</b>	Sliders A-C: group faders; PSw2: zone mute
828	<b>WaterPiano Pad</b>	Sliders A-C: zone faders, Slider D: env ctl (pad); Lg Rib: pan (mbira)
829	<b>Padded Room</b>	Sliders A-E: zone faders; Lg Rib: filter sweep (pad)
830	<b>AtmosPolySphere</b>	Sliders A-E: zone faders; Lg Rib: filter sweep

850	<b>Medal</b>	Sliders A-D: zone faders; Lg Rib: filter sweep

### About the Control Setup

The default Control Setup (97 Control Setup) has been updated. Sliders B-H are now assigned to MIDI controller numbers 22-28. CC pedal 1 is now assigned to MIDI controller 4. These default settings will make it easier to assign control sources from within the Program editor.
